USER ACCEPTANCE TESTING

USER ACCEPTANCE TESTING - INSTRUCTOR MODULE

```
Revised 2026-11-01 for app build of 2026-10-28 (commit 926b836)
  - Every case now carries a "Revision" line and an "Account Needed" line.
  - TC001-TC008 updated to current labels and behaviour; old 31/08/2026
    results moved to Comments. No case removed.
  - New TC009-TC014: forced profile completion, student interpretation and
    packed word cloud, two-format official SAST PDF, rating equivalents,
    placeholder-account activation, registration with college picker.
  - Means with no answers now show as "—" / "N/A" / "No data", never 0.00.
  - Destructive cases are marked [DESTRUCTIVE] (TC008, TC013); run them last.
  - SAST Guidelines screen checked: not reachable by an Instructor.

USER ACCEPTANCE TESTING - INSTRUCTOR MODULE
================================================================================
Capstone Project Title : iEvaluate: An AI-Driven Mobile Instructor Evaluation
                         and Performance Analysis System Using N8n Workflow
                         Automation
Team                   : ERMM
Project Leader         : Rodz Harvey Licayan
Front-End Programmer   : Michael Thomas Gonzaga
QA Engineer            : Mark Lawrence Medillo
Technical Writer       : Evangeline Caruana
Execution date         : previous run 31 August 2026; NEW RUN PENDING on the
                         2026-10-28 build
Build                  : previous run debug, Flutter 3.41.6; new run on the
                         build of 2026-10-28 (commit 926b836, branch main)
Device                 : Infinix X6525, Android 13 (API 33) (previous run)
Package                : com.example.ievaluateapp_final
Active term            : 2nd Semester, 2027-2028 (previous run)
Test account role      : Instructor (plus SAO Admin / Department Head where a
                         case says so under "Account Needed")
--------------------------------------------------------------------------------
HOW TO READ THIS DOCUMENT
--------------------------------------------------------------------------------
* Text in "double quotes" is text that appears on screen exactly as written.
  Match it character for character when testing.
* Table names in [square brackets] are database tables or edge functions to
  check when a step calls for back-end verification.
* Every step carries its own expected result, so a failing case identifies
  WHICH step failed instead of one verdict for the whole scenario.
* "Revision" says how the case changed for the 2026-10-28 build: unchanged,
  updated (with what changed), removed, or new.
* "Account Needed" names every account the case uses. [DESTRUCTIVE] in a
  title means the case changes the shared database in a way that cannot be
  undone by the tester alone: run it last, on a disposable account.
* "Actual Result" is blank until the case is run on the 2026-10-28 build.
  Results from the 31 August 2026 run of an older build are kept in
  "Comments", prefixed "Old run (31/08/2026, older build):".
* A mean with no answers behind it is shown as "—" (or "N/A" on score
  badges, "No data" as a verbal description), never as 0.00.
* One case per screen or flow. Where a screen has both a read path and a write
  path, both live in the same case, with the write steps marked so they can be
  left for last.
--------------------------------------------------------------------------------
SCREEN COVERAGE
```

```
--------------------------------------------------------------------------------
Every screen an instructor can reach has a case. The last column is the
31 August 2026 run on the older build; the new run is pending.
  SCREEN                        REACHED BY                     CASE       31/08
  ----------------------------- ------------------------------ ---------- ------

  Registration                  Login "Register"               TC014      new
  SAST Guidelines               NOT REACHABLE BY INSTRUCTOR    none       n/a
                                (SAO Admin and SAO Staff only)
  Term Subjects                 NO ENTRY POINT EXISTS          none       n/a
                                (dead code, see DEF-07)
WHAT WAS DELIBERATELY NOT EXECUTED (31 AUGUST 2026 RUN, OLDER BUILD)
  Every step that writes to or locks the live account was left for the tester:
    - profile, email and password edits   (TC007 steps 4-11)
    - deactivation with the emailed code  (TC008 steps 7-11)
    - sign-out and session clearing       (TC008 steps 1-6)
  The sign-in failure paths in TC001 steps 5-9 were also skipped, because
  repeating a wrong password trips a real lockout on a working account.
WHAT THE NEW RUN WRITES (2026-10-28 BUILD) - PLAN BEFORE RUNNING
  [DESTRUCTIVE], run last and only on disposable accounts:
    - TC008 steps 7-11  self-deactivation; bans the login until an SAO admin
                        approves it again (TC013 step 9)
    - TC013 steps 5-9   activates and approves a placeholder account, and
                        re-approves a disabled one
  Writes to a live record, not destructive:
    - TC002 step 8      department head raises a real intervention notice;
                        the instructor is emailed
    - TC007 steps 4-11  profile, email and password edits
    - TC009 steps 6-10  saves a University ID and address
    - TC014 step 9      creates a pending account; SAO admin rejects it after
  Avoid on a working account:
    - TC001 steps 5-9   repeated wrong passwords trip the attempt limit
```

COLLEGE OF TECHNOLOGY AND ENGINEERING
Information Technology Department

USER ACCEPTANCE TESTING

Test Case ID	TC001	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**SIGN-IN: VALID CREDENTIALS AND FAILURE PATHS** Instructor authenticates and reaches the dashboard, and every invalid path is refused	
Revision	updated - profile dialog may follow sign-in; exact refusal messages for wrong and deactivated logins	
Account Needed	Instructor (ACTIVE, ID and address on file); one deactivated Instructor for step 8	
Preconditions	App installed and launched. No session active, so the Login screen is shown. Account is ACTIVE and has the Instructor role. Its University ID and address are on file, so the "Complete your information" dialog (TC009) does not interrupt step 4.	
Test Data	Institutional email or University ID of the instructor account. Password held by the tester, deliberately NOT recorded in this document. One deactivated instructor account for step 8 (for example the one left by TC008). Access to the account's inbox for step 9.	
Note	Step 7 trips the attempt limit. Run steps 5-9 last, or on a throwaway account.	

Steps	1. Launch the app and wait for the splash screen to resolve. ***Expected:*** Login screen appears, headed "iEvaluate Portal" with subtitle "Secure access to academic evaluation tools."
	2. Enter the university ID or institutional email, then the password, and tap the eye icon at the right of the password field. ***Expected:*** First field's placeholder reads "University ID or Institutional Email". Password is masked by default; the eye reveals it and tapping again re-masks it.
	3. Tick "I agree to the NDA and DPA", then tap the information icon beside it. ***Expected:*** Checkbox ticks. The icon (tooltip "Read agreements") opens a dialog titled "NDA & DPA Agreements", closed with "Close".
	4. Tap "Sign In". ***Expected:*** Authentication succeeds and the app routes to "My Dashboard", with the bottom tabs Dashboard, My Subjects, Feedback and Past Terms. No other role's dashboard is shown. No "Complete your information" dialog appears for this account.
	negative paths below; run last 5. Sign out. Leave both fields empty, tick the NDA box, tap "Sign In". ***Expected:*** Refused with "Please enter your ID/email and password."
	6. Fill valid credentials but leave "I agree to the NDA and DPA" unticked. ***Expected:*** Refused with "Please agree to the NDA and DPA to log in." No session is created.
	7. Enter a valid email with an incorrect password and sign in once, then repeat until the attempt limit trips. ***Expected:*** The first attempt fails with "Incorrect ID or password. Please try again." and the typed email is not cleared. The limit then blocks with "Too many failed attempts. Please wait Xm Ys before trying again." carrying a live countdown.
	8. Sign in with the credentials of a DEACTIVATED instructor account. ***Expected:*** Denied. A deactivated login is banned in Auth, so the message is "This account has been suspended. Please contact the SAO office." (an account marked disabled but not banned shows "Your account has been deactivated by the administration."). The dashboard is never reached.
	9. Tap "Forgot Password?", complete the reset ("Reset Password", "Send Code", "Enter Code", "Verify Code", "Set New Password", "Update Password"), return and sign in with the new password. ***Expected:*** Login screen shows "Password updated successfully! Please log in with your new password." and the new password is accepted.
Expected Result	A valid instructor reaches My Dashboard; every invalid path is refused with its own specific message; and a deactivated account cannot reach any instructor screen.
Actual Result (Pass/Fail)	PARTIAL – Valid instructor credentials led to My Dashboard greeting 'Welcome back, Rodz!' with Active Term 1st Semester, 2028-2029.

Screenshot	
Comments / Attachments (Screenshots, Logs)	Steps 1-4 only. Steps 5-9 not run: failure paths risk locking a working account. Old run (31/08/2026, older build): PASS on steps 1-4. Login screen rendered as specified; after sign-in the app landed on "My Dashboard" greeting "Welcome back, Rodz!" Steps 5-9 NOT EXECUTED - would lock out a working account.

USER ACCEPTANCE TESTING

Test Case ID	TC002	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**MY DASHBOARD: SCORES, SYNC, NOTICES AND TERM REACTIVITY** Dashboard shows the instructor's own scores for the active term, and reacts to sync, notices and a term change	
Revision	updated - no-data shows "—"; stored values only; intervention notice is also emailed	
Account Needed	Instructor; Department Head of the same department (step 8); SAO Admin (step 9); optionally a second Instructor with no results this term (step 2)	
Preconditions	Signed in as instructor with at least one subject assigned in the active term. For steps 8-9, a second device signed in as SAO admin, and a department head able to raise an intervention notice.	
Test Data	View only except step 8. Cross-check [overall_total_survey] (combined_score_mean, management_mean, performance_mean, total_responses), [intervention_reports], [system_settings.current_term_id]. The instructor's inbox for step 8.	

Steps	1. Observe the hero card at the top of "My Dashboard". ***Expected:*** Shows "Welcome back, {FirstName}!", "Your Performance Overview", and "Active Term:" followed by the term set by the SAO admin.
	2. Read the large score and the badge beside it. Repeat once with an instructor who has no stored result for the active term. ***Expected:*** The number is the stored overall mean to two decimals, labelled "Overall Weighted Mean". The badge matches the band: >=4.20 Outstanding, >=3.40 Very Satisfactory, >=2.60 Satisfactory, >=1.80 Fair, >=1.00 Unsatisfactory. With no stored result the number reads "—", the label reads "No evaluation results yet", no badge is drawn, and Management and Performance read "—" - never 0.00.
	3. Compare "Management", "Performance" and "Evaluations" against [overall_total_survey] for this instructor and term. ***Expected:*** Management and Performance equal management_mean and performance_mean; Evaluations equals total_responses; the large number equals combined_score_mean, i.e. (Management + Performance) / 2. Nothing is recomputed from raw forms.
	4. Scroll to "Current Classes", then tap any subject card. ***Expected:*** Subtitle reads "Open a subject to review scores and student feedback." Every subject assigned for the active term is listed with code and name, and no subject from another term appears. Tapping a card opens Subject Detail for that subject.
	5. Scroll to the bottom two columns. ***Expected:*** "Growth" shows a bar per recent term (a term with no stored result prints "—" and draws no bar); "Recent Feedback" lists up to five latest remarks, or "No feedback yet" when there are none.
	6. Tap the sync icon in the app bar (tooltip "Manual Sync"), then pull down on the dashboard body to refresh. ***Expected:*** The icon becomes a disabled spinner while running, then a snackbar reads "Dashboard and local results synced successfully". The pull refresh runs the same sync with the same outcome.
	7. Tap the bell icon while there are no active notices. ***Expected:*** Green snackbar reads "No active intervention notices from your department head." (after a tick emoji) and no badge is drawn on the bell.
	8. Have the department head raise an intervention notice, then observe the dashboard WITHOUT restarting the app, try to dismiss the notice, and check the instructor's inbox. ***Expected:*** A red count badge appears on the bell and a card headed "Official Notice — Action Required" appears at the top, showing "From:", "Action:" and "Notes:". No dismiss control exists - a lock icon carries the tooltip "Only your department head can remove this notice". An email with the subject "Official Notice: Intervention Report Issued" arrives in the instructor's inbox.
	9. While the dashboard is open, have the SAO admin switch the active term. ***Expected:*** The dashboard reloads on its own and "Active Term:" plus every figure updates, without a manual restart.
Expected Result	The dashboard presents this instructor's own stored active-term scores, every figure reconciles with [overall_total_survey], missing results show as "—" rather than 0.00, notices are read-only and emailed, and a term change propagates without a restart.
Actual Result (Pass/Fail)	PARTIAL – My Dashboard showed 1.68 Unsatisfactory overall weighted mean, Management 1.68, Performance 1.67, 245 evaluations, View Official SAST Report and Current Classes.

Screenshot	
Comments / Attachments (Screenshots, Logs)	Viewed only. Old run (31/08/2026, older build): PASS on steps 1-5. Observed 2.99 / "Satisfactory", Management 3.00, Performance 2.99, Evaluations 50, active term "2nd Semester, 2027-2028", with "IAS 301" under Current Classes. The band correctly matches the 2.60-3.39 rule. Steps 6-9 NOT EXECUTED - need a second SAO admin session and a department-head notice.

USER ACCEPTANCE TESTING

Test Case ID	TC003	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**MY SUBJECTS AND SUBJECT DETAIL** Assigned subjects for the term, and the criterion breakdown and comments for one subject	
Revision	updated - "—" for blanks; "x of y answered" counts; empty state; one card per class record	
Account Needed	Instructor	
Preconditions	Signed in as instructor with subjects assigned in the active term, at least one carrying recorded evaluations.	
Test Data	View only. Cross-check [instructor_subjects], [management_results] m1-m10 (and m1_count..), [performance_results] p1-p10, [student_remarks]. Ideally: one subject with no processed forms, one with some criteria left blank on every form, and one subject code with two class records this term.	

Steps	1. Tap the "My Subjects" tab and read the summary header. ***Expected:*** Screen opens titled "My Subjects". The header shows the term label, "Term Performance", the verbal-description pill, the value under "Overall Weighted Mean", and a count under "Assigned Subjects". With no stored term result the value reads "N/A" and the pill "No data".
	2. Compare the "Assigned Subjects" count with the number of subject cards and with [instructor_subjects]. ***Expected:*** All three agree. No subject belonging to another instructor or another term is listed.
	3. Inspect one subject card, then compare the header's term value with the dashboard. ***Expected:*** The card shows the subject code in capitals, the subject name, a score badge with the mean to two decimals and its code (O / VS / S / F / US), or "N/A" with no code when the subject has no answers, plus "Management" and "Performance" mini-metrics ("—" when missing). The header value matches the dashboard's.
	4. Pull down to refresh, then tap a subject card. ***Expected:*** The list reloads without error, and the card opens Subject Detail with the subject code as the app-bar title and a back arrow; the header shows the code above the subject name and "N total respondents". If that code has more than one class record this term, a note reads "Showing the most recent of N class records for {CODE}."
	5. Read the three summary cards on Subject Detail, then open a subject with no processed forms. ***Expected:*** "Management", "Performance" and "Overall Weighted Mean" are shown, the third also carrying its verbal description. The subject with no forms shows "No evaluation results yet" with "Scores for this subject will appear here once its evaluation forms have been processed." and no tables.
	6. Expand and collapse "I. Management Breakdown". ***Expected:*** Section starts expanded and toggles on tap with the arrow rotating. Table columns are "No." / "Criteria" / "Mean" / "VD" across all ten SS Form 2 management criteria. Under each mean a small line reads "x of y answered" (omitted for older rows); a criterion nobody answered shows "—" with VD "-".
	7. Expand "II. Performance Breakdown" and verify each mean against the database. ***Expected:*** All ten performance criteria are listed and every mean matches p1_mean-p10_mean for this subject and term.
	8. Scroll the "Per-Question Visualization" chart sideways. ***Expected:*** Twenty bars labelled "M1"-"M10" and "P1"-"P10", each printing its score, each matching the tables above. A question with no answers prints "—" and draws no bar.
	9. Under "Student Feedback", apply each chip - "All", "Positive", "Neutral", "Critical" - including one tone with no comments for this subject. ***Expected:*** The counter reads "{filtered} of {total}" and updates per chip. Only remarks of the selected tone remain, and only for this subject. An empty tone reads "No {tone} feedback for this subject." in lower case, e.g. "No critical feedback for this subject."
	10. Cycle the sort dropdown through all four options. ***Expected:*** "Date (Newest)", "Date (Oldest)", "Sentiment (Positive First)" and "Sentiment (Critical First)" each reorder correctly, and the sort survives changing the chip.
Expected Result	Every assigned subject is listed with stored scores that reconcile with the dashboard, unanswered values show as "—" or "N/A", and for one subject both criterion tables, the twenty-bar chart and the filtered comments agree with the stored results.
Actual Result (Pass/Fail)	PARTIAL – My Subjects showed 1ST SEMESTER 2028-2029 term performance 1.68, 16 Assigned Subjects and subject cards with 2-decimal scores and verbal ratings.

Screenshot	
Comments / Attachments (Screenshots, Logs)	Subject detail not opened. Old run (31/08/2026, older build): PASS on steps 1, 3, 4, 5, 6, 8 and the filter half of step 9. MY SUBJECTS: header showed "2ND SEMESTER 2027-2028", "Term Performance", the "Satisfactory" pill, 2.99 overall and 4 assigned subjects, matching the dashboard exactly. Both spot-checked bands are correct: "IAS 301" at 3.55 VS (Mgmt 3.70 / Perf 3.40) and "NETWORK 202" at 3.03 S (3.00 / 3.06). SUBJECT DETAIL: opened "CAPSTONE 401" from a HISTORICAL term. Header read "Capstone Project 1" / "26 total respondents"; cards showed Management 3.04, Performance 3.02, Overall 3.03 "Satisfactory" - matching the Past Terms card exactly, so historical scoping is correct. Both breakdowns render with No./Criteria/Mean/VD and the correct SS Form 2 wording, and the collapse toggle works (Management collapsed on tap, arrow flipped). The per-question chart renders with M1-M9 visible and scrolls for the rest. Feedback showed "3 of 3" with chips "All 3" / "Positive 0", sort defaulting to "Date (Newest)", and tone-coloured cards. Step 2 needs the database cross-check; the empty-tone half of step 9 and step 10 not executed. MINOR: long subject names truncate on the card, e.g. "Information Assurance and..."; "Overall Weighted M..." truncates in the Subject Detail summary card.

USER ACCEPTANCE TESTING

Test Case ID	TC004	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**STUDENT FEEDBACK: TONE, AI INSIGHTS, WORD CLOUD AND QUOTES *** FAIL - DEF-02 (FIXED, AWAITING RE-TEST) ***** Sentiment split, AI-generated interpretation, word cloud legibility and all quote filters	
Revision	updated - new header; student interpretation; bullet insight cards; fixed packed word cloud	
Account Needed	Instructor; a second Instructor with no AI row for the term (step 6)	
Preconditions	Feedback screen reachable, and the active term has processed student remarks across at least two subjects and more than one tone.	
Test Data	View only. Verify against [student_remarks], [instructor_ai_suggestions] (most recent row by updated_at) and [instructor_wordcloud] (up to 200 by count), matched on instructor ID and term ID.	

Steps	1. Tap the "Feedback" tab. ***Expected:*** Two-line app-bar title, "Student Feedback" above the active term, with a refresh icon (tooltip "Refresh"). The page header reads "Student Voice" above "Student Feedback", with subtitle "Sentiment, recurring themes, and individual comments."
	2. Inspect "Emotional Tone Overview". ***Expected:*** A segmented bar plus three percentages labelled "Positive", "Neutral", "Critical". The three add up to 100% (rounding aside), and the bar segment widths match the percentages.
	3. Count the tone values in [student_remarks] for this instructor and term, and compare. ***Expected:*** Each on-screen percentage equals its share of the stored tone values. The comment total matches the Direct Quotes counter.
	4. Read "What Your Students Are Saying" under "AI Instructor Insights". ***Expected:*** Sub-label reads "AI-generated interpretation". The paragraph matches [instructor_ai_suggestions.student_interpretation] for this instructor and term (ai_suggestion only when that is empty - see TC010). It is NO LONGER the paragraph printed under the report's "COMMENTS & FEEDBACK SUMMARY:", which shows ai_suggestion. The pill at the foot reads "Based on N comments" with N equal to the actual comment count.
	5. Compare "Key Positive Themes" and "Improvement Insights" against the database. ***Expected:*** Each card has its subtitle ("Consistently praised aspects of your teaching" / "Areas flagged in student feedback worth reviewing") and a tinted box listing the points as bullets, one per stored line of positive_themes / improvement_insights. Nothing is invented, and either card is hidden when its column is empty.
	6. Sign in as an instructor whose AI row has not been generated yet. ***Expected:*** The screen still renders. The interpretation area reads "Analyzing your feedback..." (no row) or "No AI interpretation available yet." (row with empty text), never another instructor's content, and does not crash.
	7. Scroll to "AI Word Cloud", read every word in the panel, then pull to refresh twice and read it again. ***Expected:*** EVERY WORD SHOWN IS FULLY VISIBLE AND LEGIBLE. No word is clipped at any edge of the dark panel, including rotated words. Words are packed from the centre, larger for higher counts in [instructor_wordcloud], in white and light brand tints. The arrangement is FIXED: refreshing gives the same layout (no reshuffle). With no words the panel reads "No feedback data yet for this term."
	8. Scroll to "Direct Quotes" and read the counter beside the heading. ***Expected:*** Counter reads "N Comments", is fully on screen and not cut off at the right edge, and equals the number of quote cards below.
	9. Tap each tone chip in turn, then open the subject dropdown and pick each entry, then combine a tone chip with a subject selection. ***Expected:*** Each chip carries a count badge, the list narrows to that tone, the counter updates, and the badge counts sum to the "All" count. The dropdown's first entry is "All Subjects", followed by every subject code found in the remarks, sorted A-Z. The two filters apply TOGETHER, not one replacing the other, and the counter reflects the combined result.
	10. Cycle the sort dropdown through all four options, then choose a filter combination with no matching comments. ***Expected:*** "Date (Newest)" is the default. "Date (Oldest)", "Sentiment (Positive First)" and "Sentiment (Critical First)" each reorder correctly, and the sort holds while filters change. An empty combination replaces the list with "No comments match this filter." and no stale quote cards remain.
	11. Inspect one quote card. ***Expected:*** Shows the subject-code pill, the date as YYYY-MM-DD, the remark in italics inside quotation marks, and a tone icon with its label. The card border colour matches the tone.
Expected Result	Tone percentages match the stored remarks, every AI-generated element traces back to this instructor's own row, all word-cloud words are legible and stay put on refresh, and the tone, subject and sort controls filter correctly alone and combined.
Actual Result (Pass/Fail)	PARTIAL – Student Feedback showed Emotional Tone Overview (67% Positive, 4% Neutral, 29% Critical) and an AI Instructor Insights interpretation.

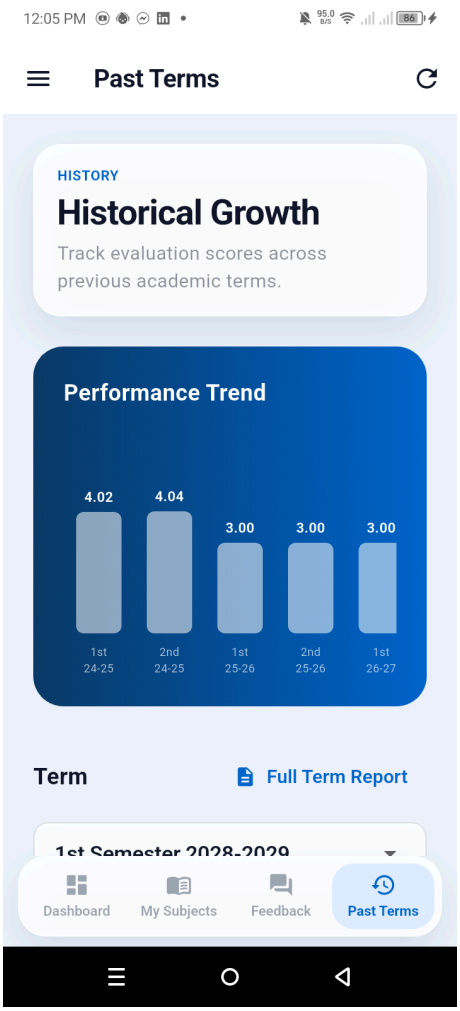

Screenshot	
Comments / Attachments (Screenshots, Logs)	Viewed only. Old run (31/08/2026, older build): FAIL AT STEP 7. The rotated word "Fair grading" is clipped at the right edge of the word-cloud panel and cannot be read in full. Raised as DEF-02. PASS on steps 1, 2 and 4: observed 51% Positive, 14% Neutral, 35% Critical, summing to 100% and consistent with 25 positive of 49 comments. "What Your Students Are Saying" rendered a populated interpretation with the correct sub-label. Filters themselves rendered correctly: "All 49" / "Positive 25", with "All Subjects" and "Date (Newest)" defaults present, and the chip counts internally consistent (25 positive of 49 matches the 51% tone figure). Step 8 raised as DEF-04. Steps 3, 5, 6 and 9-11 not fully executed. DEF-02 and DEF-04 were fixed on 31/08/2026 - see the defect log. The word cloud has since been replaced by a fixed packed layout, so step 7 is re-read after two refreshes to confirm the layout does not move and no word is clipped.

USER ACCEPTANCE TESTING

Test Case ID	TC005	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**PAST TERMS, TREND CHART AND HISTORICAL TERM SELECTION** Historical scores across previous academic terms	
Revision	updated - one card per class record; terms or subjects with no answers show "—"	
Account Needed	Instructor	
Preconditions	The instructor has evaluation data in at least two previous terms.	
Test Data	View only. [overall_total_survey] joined to [academic_terms]; [instructor_subjects], [management_results], [performance_results] for the selected term. One term with no subjects (step 5).	
Steps	1. Tap the "Past Terms" tab and wait for loading to finish. ***Expected:*** Screen opens titled "Past Terms", showing "History" above "Historical Growth" and "Track evaluation scores across previous academic terms." The placeholder "Loading past terms…" is replaced by content.	
	2. Inspect the "Performance Trend" chart AND SCROLL IT SIDEWAYS TO ITS END. ***Expected:*** One bar per term with data, oldest to newest, each printing its score to two decimals over a two-line term label (a term with no stored score prints "—" with no bar). EVERY term that has data appears, INCLUDING the current active term. NOTE: the chart scrolls horizontally and the newest terms sit off-screen until scrolled. Scroll before judging.	
	3. Tap a bar in the chart, then open the term dropdown (hint "Select Term") and select a different term. ***Expected:*** A tapped bar becomes solid white to show selection and the subject list below reloads for that term. The dropdown lists terms newest first, and changes the chart highlight and the subject list together - the two never disagree about which term is selected.	
	4. For the selected term, check the "Subjects Taught" list. ***Expected:*** The counter reads "N Subjects" and matches the number of cards. Every card belongs to the SELECTED term, not the active one. Each class record is its own card: two sections of one subject code show as two cards, each with its own stored means (not merged).	
	5. Select a term with no subject records. ***Expected:*** Message reads "No subjects found for this term." and no cards from the previous term remain on screen.	
	6. Tap a subject card while a HISTORICAL term is selected. ***Expected:*** Subject Detail opens showing that historical term's figures, not the active term's.	
Expected Result	The trend chart, the dropdown and the subject list stay consistent with one another, and every historical term's data is reachable and correctly scoped.	
Actual Result (Pass/Fail)	PARTIAL – Past Terms showed Historical Growth with a Performance Trend chart and a term selector (1st Semester 2028-2029) with Full Term Report.	

Screenshot	
Comments / Attachments (Screenshots, Logs)	Term selection not exercised. Old run (31/08/2026, older build): PASS on steps 1-4 and 6. The chart holds 8 bars and scrolls to reveal all of them, ending at "2nd 27-28" at 2.99, drawn solid white as the selected term and agreeing with the dashboard. The dropdown lists all 8 terms newest first, matching the 8 bars. Selecting "1st Semester 2025-2026" reloaded the list to "4 Subjects", with "CAPSTONE 401" showing 3.03 S, Management 3.04 and Performance 3.02, correctly banded. Tapping it opened Subject Detail with that historical term's figures. Step 5 (a term with no subjects) not executed.

USER ACCEPTANCE TESTING

Test Case ID	TC006	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**OFFICIAL EVALUATION REPORT AND PDF EXPORT *** FAIL - DEF-01, DEF-03 (FIXED, AWAITING RE-TEST) ***** Official SAST report on screen and as a PDF	
Revision	updated - screen title "Official SAST Report"; answered counts; PDF layout detail moved to TC011	
Account Needed	Instructor	
Preconditions	The instructor has evaluation data in the active term and in at least one past term. The device allows writing to Downloads.	
Test Data	View and export. [overall_total_survey], [overall_question_means] (mean_score, response_count), [instructor_wordcloud], [instructor_ai_suggestions]. CORRECTION TO THE PREVIOUS VERSION OF THIS DOCUMENT The download control is NOT on Past Terms. "Full Term Report" only navigates. The download icon lives in the app bar of the report screen.	

Steps	1. From the dashboard hero card, tap "View Official SAST Report". ***Expected:*** Screen opens titled "Official SAST Report", populated for the ACTIVE term. For a term with no stored result it shows only "No evaluation results yet" and "Results for this term will appear here once evaluation forms have been processed."
	2. Go back, open "Past Terms", select a past term, then tap "Full Term Report". ***Expected:*** The same report screen opens, populated for the SELECTED PAST term. The academic year in the header is that term's, not the active one's.
	3. Check the official header block. ***Expected:*** Shows the CTU logo, "Republic of the Philippines", "CEBU TECHNOLOGICAL UNIVERSITY", "ARGAO CAMPUS", "Ed Kintanar Street, Lamacan, Argao, Cebu", then "STUDENTS' ASSESSMENT SURVEY FOR TEACHERS (SAST)" and "INDIVIDUAL REPORT AND COMMENTS", with "Instructor Name:", "Instructor ID:", "Academic Year:" and "Department:" correctly filled AND FULLY READABLE (long values wrap). "Academic Year:" reads e.g. "1st Semester 2025-2026", with "Semester" exactly once.
	4. Verify the summary table and both criterion tables. ***Expected:*** Columns "N" / "MANAGEMENT" / "PERFORMANCE" / "OVERALL", each score paired with its VD code. Sections "I. Management" and "II. Performance" each list ten criteria, each mean with "x of y answered" under it where counts exist ("—" and "-" when nobody answered), and end with "Section Mean: x.xx (Verbal)", e.g. "Section Mean: 3.04 (Satisfactory)".
	5. Check "COMMENTS & FEEDBACK SUMMARY:" and the "Top Feedback Terms" box. ***Expected:*** The paragraph equals [instructor_ai_suggestions.ai_suggestion] (or "No significant trends identified for this period." when empty), and the box lists the top five terms as "word (count)" matching [instructor_wordcloud].
	6. Check the "RANGE & Verbal Description (VD):" legend against the scores. ***Expected:*** Legend lists the five bands from "4.20 - 5.00 : Outstanding (O)" down to "1.00 - 1.79 : Unsatisfactory (US)", and every VD code printed in the tables obeys it.
	7. Tap the download icon in the app bar, then tap it again quickly. ***Expected:*** A PDF named "SAST_Report_{Instructor_Name}.pdf" (spaces become underscores) is written to the device's Downloads or Documents folder, and the system share or print sheet opens - only once, even after the second tap.
	8. Open the saved PDF and compare it with the screen, then repeat the export for a past term. ***Expected:*** Scores, criteria and comments match the on-screen report. The PDF uses the official two-format layout checked in detail in TC011; it no longer prints "INDIVIDUAL SUMMARY REPORT" or "SS Form No. 2". THE TERM READS CORRECTLY: "Term" and "Academic Year" are separate fields on the comments page and the other pages print "AY 1ST SEM 2025-2026", so "Semester" never doubles. The past-term export holds the SELECTED PAST term's figures.
Expected Result	The report renders correctly for both the active and any past term, and downloads as a PDF whose contents match the term that was selected.
Actual Result (Pass/Fail)	PARTIAL – Official SAST Report showed the instructor header, 245 respondents and Management 1.68 US, Performance 1.67 US, Overall 1.68 US.

Screenshot	
Comments / Attachments (Screenshots, Logs)	Viewed only; PDF export not run. Old run (31/08/2026, older build): FAIL AT STEPS 3 AND 8. Steps 2, 4 and 7 PASS: opening "Full Term Report" for "1st Semester 2025-2026" produced that term's figures (N 100, Management 3.01, Performance 2.97, Overall 2.99, all banded S), the official header and criterion tables rendered, and the download wrote "SAST_Report_Rodz_Harvey_Licayan.pdf" (736 KB) whose scores match the screen exactly. STEP 3 FAILS: header fields are truncated on screen to "Rodz...", "1st Se..." and "College o..." (DEF-03). STEP 8 FAILS: the PDF reads "Academic Year: 1st Semester Semester 2025-2026", with the word Semester duplicated (DEF-01). Steps 1, 5, 6 and the past-term half of step 8 not executed. DEF-01 and DEF-03 were both fixed on 31/08/2026 - see the defect log. Re-test step 3 for the header fields, and step 8 plus TC011 for the term in the rebuilt PDF.

Test Case ID	TC007	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**ACCOUNT SETTINGS: PROFILE, NOTIFICATIONS, EMAIL AND PASSWORD** Profile editing, notification preference, email confirmation flow and password rules	
Revision	updated - new name and email validation messages; password dialog titled "Change Password"	
Account Needed	Instructor; a second existing account's full name (step 6)	
Preconditions	Signed in as instructor, with access to the account's inbox for steps 8-9.	
Test Data	First and last name of the test instructor. A second existing account's full name, for step 6. An email already used by another account. A reachable new email address. A new password of at least six characters, NOT recorded here.	
Note	Steps 4-11 all write to the live account, and a successful password change signs the user out. Run the read-only steps 1-3 first.	

Steps	1. Open the hamburger menu and read the drawer. ***Expected:*** Header shows the initials avatar (first and last initial, same as Settings), full name and the role "Instructor". Items are "Account Settings" and "Log Out".
	2. Tap "Account Settings" and confirm which fields can be edited. ***Expected:*** Screen opens with app-bar title "Account Settings"; the header reads "Instructor Account" / "Settings" with the subtitle "Profile, notifications, sign-in, and account security." Name, email and password are editable; title, role and department are DISPLAY ONLY; there is no avatar upload.
	3. Scroll to the bottom of Settings. ***Expected:*** Footer reads "iEvaluate Version 1.0.0 (Prototype)".
	steps below write to the live account 4. Tap "Edit Personal Details". ***Expected:*** A sheet titled "Edit Profile" opens with "First Name" and "Last Name" fields and a warning that the name must match official school records because it is used for scanner validation.
	5. Change the name and tap "Save Changes". ***Expected:*** Snackbar reads "Profile updated successfully!" The new name appears in the drawer header and the dashboard greeting.
	6. Clear the last name and tap "Save Changes"; then try to save a full name identical to another existing account. ***Expected:*** The blank name is refused with "Please fill in both first and last name." The duplicate is refused with "Error: An account for "{First Last}" already exists. A first name or a last name may be shared, but not both. Add a middle initial or suffix to tell the two people apart." No duplicate identity is created.
	7. Toggle "Push Notifications" off, then on. ***Expected:*** Snackbars read "Push notifications disabled." then "Push notifications enabled." The setting survives closing and reopening the screen.
	8. Tap "Edit Email", then submit an address with no "@", an empty field, your current address, and an address used by another account. ***Expected:*** Dialog titled "Edit Email" reads "Enter your new email address. You will receive a confirmation link.", with a "New Email" field and "Cancel" / "Update" buttons. The first two are refused with "Please enter a valid email address.", the current one with "This is already your current email address.", the taken one with "This email address is already registered to another account." None is accepted as a change.
	9. Submit a valid new address. BEFORE clicking the emailed link, sign out and sign back in with the OLD address. Then click the link and sign in with the new address. ***Expected:*** Snackbar reads "Email updated! Check your inbox for confirmation." and the email arrives. The OLD address still works until the link is clicked. Afterwards the new address is accepted and the old one no longer authenticates.
	10. Tap "Edit Password" and submit each invalid case in turn: blank fields; a confirmation that differs; a matching password shorter than six characters; a valid password with the wrong current password. ***Expected:*** A dialog titled "Change Password" opens with "Current Password", "New Password" and "Confirm Password". Each case is refused with its own message - "Please fill in all fields.", "Passwords do not match.", "Password must be at least 6 characters.", "Current password is incorrect." - and the password is never changed.
	11. Submit a fully valid password change, then sign in with the old password and with the new one. ***Expected:*** Snackbar reads "Password updated. Please log in again." and after a short pause the app signs out to the Login screen. The old password is then rejected and the new one accepted.
Expected Result	The instructor can change their own name and notification preference, blank and duplicate names are refused, read-only fields cannot be edited, an email change is validated and takes effect only once confirmed, and every password rule has its own message.
Actual Result (Pass/Fail)	PARTIAL – Account Settings showed Profile, Notifications and Security sections.

Screenshot	
Comments / Attachments (Screenshots, Logs)	Viewed only. No edits: they change account data. Old run (31/08/2026, older build): PASS on steps 1-3. The drawer showed the initials avatar, "Rodz Harvey Licayan", role "Instructor", and both "Account Settings" and "Log Out". Settings opened with the correct heading and subtitle; Profile showed the name over "FULL-TIME - College of Technology and Engineering" with "Edit Personal Details". Title and department are display only with no avatar upload, as required. Security lists "Edit Email", "Edit Password" and "Deactivate My Account", above "Sign Out Securely" and the footer "iEvaluate Version 1.0.0 (Prototype)". Steps 4-11 DELIBERATELY NOT EXECUTED - they write to the live account. Defect found: avatar initials disagree between screens (DEF-05).

Title / Business Scenario	**SIGN-OUT, SESSION TERMINATION AND SELF-DEACTIVATION [DESTRUCTIVE]** Session and cached data are cleared on sign-out, and deactivation is guarded by a 6-digit emailed code	
Revision	updated - doc fix: a deactivated login is banned, so step 11 expects the "suspended" message	
Account Needed	Instructor (disposable); a second Instructor (step 5); SAO Admin (step 11, and to restore the account afterwards - TC013 step 9)	
Preconditions	Signed in as an instructor with the dashboard already loaded once, so cached data exists. Access to the account's inbox. A second instructor account for step 5.	
Test Data	The 6-digit code emailed during the run. Edge functions [send-admin-code] and [delete-user]. WARNING: Steps 7-11 LOCK the account. Only an SAO admin can reactivate it, so use a disposable test account and arrange reactivation in advance. Run the sign-out steps 1-6 first.	

Steps	1. Open "Account Settings", tap "Sign Out Securely", then tap "Cancel". ***Expected:*** A confirmation dialog titled "Log Out" appears with "Cancel" and "Log out". Cancel closes it and the session continues.
	2. Reopen and tap "Log out". ***Expected:*** An overlay reads "Signing you out…" over "Clearing your session data.", then the Login screen appears.
	3. Press the Android back button from the Login screen. ***Expected:*** The app does not return to the dashboard. No instructor screen is reachable without signing in again.
	4. Force-close the app, reopen it, and observe the splash. ***Expected:*** The app opens on the Login screen, not a restored session. Run this only after an explicit sign-out.
	5. Sign in as a DIFFERENT instructor. ***Expected:*** The dashboard shows only the new instructor's data. No cached name, score, subject or comment from the previous account is visible at any point.
	6. Repeat the sign-out using "Log Out" from the side drawer instead of Settings. ***Expected:*** The drawer route behaves identically to the Settings route.
	steps below LOCK the account 7. Tap "Deactivate My Account", tap outside the dialog, then tap "Cancel". ***Expected:*** A dialog titled "Deactivate Account?" explains the account can only be restored by the SAO Admin, and notes a 6-digit code will be emailed. Buttons are "Cancel" and "Send Code". Tapping outside does NOT dismiss it, so deactivation cannot be triggered accidentally, and Cancel leaves the account fully active.
	8. Reopen the dialog and tap "Send Code". ***Expected:*** The dialog moves to a 6-digit numeric field hinted "000000", and a code arrives by email.
	9. Submit each invalid case: fewer than six digits; six INCORRECT digits; "Resend code" twice in quick succession; a stale code past its expiry. ***Expected:*** Refused with "Enter the 6-digit code from your email."; then the server's wrong-code message in red; then a rate-limit message naming the seconds remaining; then refused as expired with a fresh code required. The account stays active throughout.
	10. Enter the correct 6-digit code, typing the sixth digit last, and wait for the flow to finish. ***Expected:*** The dialog submits AUTOMATICALLY on the sixth digit, without a second tap, and a blocking overlay reads "Deactivating account…" over "Signing you out and locking the account." The session is then cleared and the app returns to the Login screen with no way to navigate back into the app.
	11. Try to sign in with the deactivated account, then as SAO admin confirm the instructor's evaluation records still exist. ***Expected:*** Sign-in is refused with "This account has been suspended. Please contact the SAO office." (the login is banned in Auth). This is a DEACTIVATION, not a deletion - [user_info] account_status is "disabled", scores and remarks are retained, and the account can be reactivated (TC013 step 9).
Expected Result	Signing out clears the session and cached data with no leak into the next session. Deactivation completes only after a correct emailed code, after which the account cannot sign in but its evaluation data is preserved.
Actual Result (Pass/Fail)	NOT RUN – Sign-out and self-deactivation were not run.
Screenshot	
Comments / Attachments (Screenshots, Logs)	Not run: changes shared data. Old run (31/08/2026, older build): NOT EXECUTED - would lock the live account. Related observation from that run: force-closing the app and relaunching WITHOUT signing out correctly restored the session and the previously selected term. Step 4 must be run only after an explicit sign-out. The previous version expected "Your account has been deactivated by the administration." at step 11. That message only shows for an account marked disabled but not banned; [delete-user] bans the login, so the "suspended" message is what the app shows.

Title / Business Scenario	**FORCED PROFILE COMPLETION AFTER SIGN-IN** An instructor with a missing University ID or address must supply it before using the app, and can only leave by logging out	
Revision	new	
Account Needed	Instructor whose University ID and address are blank (e.g. the account activated in TC013)	
Preconditions	The account is approved and can sign in, and its [user_info].university_id and address are blank. For step 11 a second account missing only the address (optional).	
Test Data	A free University ID (4-30 letters, numbers or hyphens). A University ID already registered to another account. A street ("House No. / Street / Purok") and a barangay, municipality and province. Read access to [user_info] for step 9.	
Note	Steps 6-10 write the ID and address to the live account. The dialog is asked once per sign-in.	

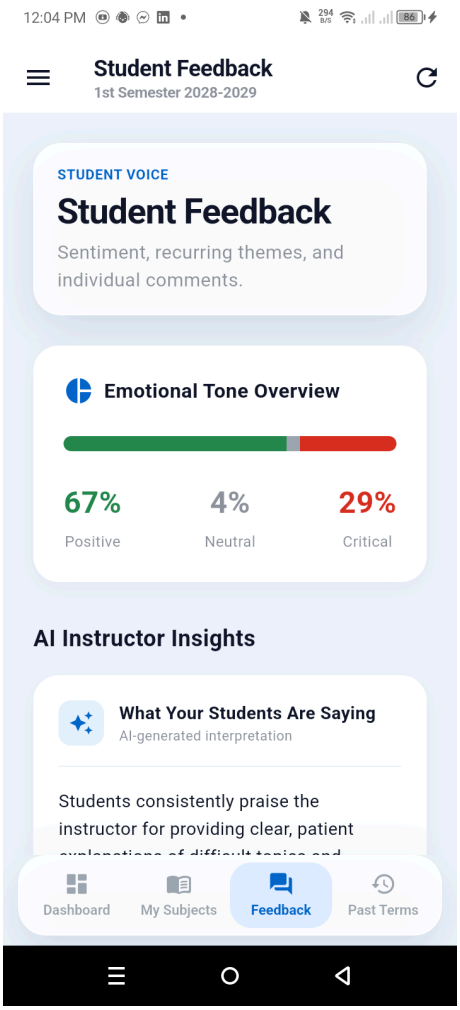

Steps	1. Sign in with the incomplete account. ***Expected:*** The dashboard appears, then a dialog titled "Complete your information" opens over it reading "Your profile is missing your University ID and your address. Please add them to continue. This information is required." Fields are "University ID", "House No. / Street / Purok" and "Barangay, Municipality, Province"; buttons are "Log out" and "Save". There is no "Later" button.
	2. Tap outside the dialog, then press the Android back button. ***Expected:*** The dialog stays open both times; the dashboard behind it cannot be used.
	3. Tap "Save" with every field empty. ***Expected:*** Nothing is saved. A red banner reads "University ID is required", and the fields show "University ID is required", "House number / street is required" and "Barangay is required".
	4. Type "AB1" as the ID, then "AB 12!". ***Expected:*** "University ID must be at least 4 characters", then "University ID must be letters, numbers, or hyphens only".
	5. Start typing in the barangay field. ***Expected:*** A suggestion list appears with the hint "Pick from the list, or type it in full if it is not there." (or "Type your barangay, municipality and province." when no list is available).
	steps below write to the live account 6. Enter an ID already registered to another account plus a valid address, and tap "Save". ***Expected:*** Refused with "This University ID is already registered to another account. Please check the number, or contact the SAO office." The dialog stays open.
	7. Tap "Log out". ***Expected:*** The session ends and the Login screen appears; the back button does not return to the dashboard.
	8. Sign in again with the same account. ***Expected:*** The "Complete your information" dialog opens again, because the profile is still incomplete.
	9. Enter a free University ID and a valid address, tap "Save", then check [user_info] for this account. ***Expected:*** The dialog closes and a snackbar reads "Your information has been saved." university_id and address now hold the values typed. If the server refuses ID changes from the app, the dialog instead reads "Your address was saved, but your University ID cannot be set from the app. Please ask the SAO office to add it for you." and asks only for the ID.
	10. Sign out and sign in again. ***Expected:*** No dialog appears; the dashboard is usable straight away.
	11. (Optional) Sign in with an account missing only its address. ***Expected:*** The dialog reads "Your profile is missing your address. Please add it to continue. This information is required." and shows only the address fields.
Expected Result	An instructor with a missing ID or address cannot use the app until both are saved, invalid and duplicate IDs are refused with their own messages, "Log out" is the only other way out, and a completed profile is never asked again.
Actual Result (Pass/Fail)	NOT RUN – Forced profile completion was not run.
Screenshot	
Comments / Attachments (Screenshots, Logs)	Not run: needs an account with a blank ID or address.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**STUDENT INTERPRETATION, INSIGHT BULLETS AND BRAND WORD CLOUD** The Feedback screen shows the students' interpretation, lists themes as clean bullets and draws a fixed, brand-coloured word cloud	
Revision	new	
Account Needed	Instructor with an AI row for the active term; read access to the database for the cross-checks	
Preconditions	Signed in as instructor. [instructor_ai_suggestions] has a row for this instructor and the active term, and [instructor_wordcloud] holds words for it.	
Test Data	View only. [instructor_ai_suggestions] columns student_interpretation, ai_suggestion, positive_themes, improvement_insights. [instructor_wordcloud] word and count. If found by query: one row whose student_interpretation is empty but ai_suggestion is not (step 3), and rows whose themes are stored one-per-line, as an array literal {"a","b"}, and as one paragraph (step 4).	
Steps	1. Open the "Feedback" tab and read "What Your Students Are Saying". ***Expected:*** The paragraph is exactly student_interpretation from the most recent row for this instructor and term.	
	2. Open "Official SAST Report" for the same term and read "COMMENTS & FEEDBACK SUMMARY:". ***Expected:*** The report shows ai_suggestion. The two paragraphs may differ; this is by design (the Feedback screen speaks for the students, the report gives the recommendation).	
	3. Sign in as an instructor whose student_interpretation is empty but whose ai_suggestion is filled. If no such row exists, record N/A. ***Expected:*** "What Your Students Are Saying" shows the ai_suggestion paragraph instead. With both empty it reads "No AI interpretation available yet."	
	4. Compare "Key Positive Themes" with positive_themes for each storage shape available. ***Expected:*** Text with one point per line gives one bullet per line, with leading "-", "*", bullet or "1." markers removed and repeated lines shown once. An array literal gives one bullet per element, each starting with a capital and ending with a period. An old single paragraph shows as ONE bullet and is never cut at commas.	
	5. Repeat step 4 for "Improvement Insights" and improvement_insights. ***Expected:*** Same rules; the card is hidden when the column is empty.	
	6. Look at the "AI Word Cloud" panel. ***Expected:*** Phrases from [instructor_wordcloud] are kept whole and packed from the centre, the most frequent largest. The biggest word is white and the rest use light blue, teal, indigo and purple tints of the app's brand colours on the dark panel - not the yellow and green palette of the older build. No word overlaps another or runs past the panel edge.	
	7. Pull to refresh three times, then leave the tab and come back. ***Expected:*** The words keep exactly the same positions, sizes and colours each time. A word that does not fit is left out rather than shown clipped.	

Expected Result	The interpretation, themes and word cloud all trace back to this instructor's own stored row, themes read as clean bullets whatever their stored shape, and the word cloud is legible, brand-coloured and stable across refreshes.
Actual Result (Pass/Fail)	PARTIAL – Student Feedback showed the AI interpretation paragraph and tone percentages.
Screenshot	
Comments / Attachments (Screenshots, Logs)	Insight bullets and word cloud not checked.

USER ACCEPTANCE TESTING

Test Case ID	TC011	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**OFFICIAL SAST PDF: TWO FORMATS AND PER-SUBJECT PAGES** The exported report follows the official two-form layout: a comments page, then an OVERALL page and one page per subject	
Revision	new	
Account Needed	Instructor with results in two or more subjects in one term; SAO Admin (step 1, view only)	
Preconditions	The instructor has stored results for at least two subjects in the selected term, an AI row and word cloud words. The device allows writing to Downloads and has a PDF viewer.	
Test Data	View and export only. [report_signatories] row 1, [management_results] and [performance_results] per subject, [overall_total_survey], [instructor_ai_suggestions], [instructor_wordcloud]. Do NOT edit the signatories - they print on everyone's reports.	

Steps	1. As SAO Admin, open the drawer item "Report Signatories" and note the three names and titles. Do not save anything. ***Expected:*** The screen reads "Report Signatories" / "Names shown on printed reports" with "Prepared by", "Checked and Verified" and "Certified Proper and In Order", each with "Name" and "Title".
	2. As the instructor, open "Official SAST Report" for the term and tap the download icon. ***Expected:*** "SAST_Report_{Instructor_Name}.pdf" is saved and the share or print sheet opens.
	3. Open the PDF and read the first page (comments format). ***Expected:*** The letterhead shows "Republic of the Philippines", "CEBU TECHNOLOGICAL UNIVERSITY", "ARGAO CAMPUS", the campus address, website, email and phone. Below it: "STUDENTS' ASSESSMENT SURVEY FOR TEACHERS (SAST)" and "INDIVIDUAL REPORT AND COMMENTS", then "Term", "Academic Year", "College" (when known), "Department" and "Name of Faculty" in capitals, and a table "N" / "MANAGEMENT" / "PERFORMANCE" / "OVERALL" matching the screen.
	4. Read the "COMMENTS:" paragraph. ***Expected:*** One flowing paragraph starting "Integrated with the quantitative ratings (Management = x.xx ..." with the screen's figures and their verbal descriptions, then the top word-cloud terms, the students' interpretation, "Students particularly appreciated ...", "Areas identified for improvement include ..." and the recommendation, taken from this instructor's row.
	5. Check the word cloud and the signature block on the comments page. ***Expected:*** "Students' Feedback on {Name}'s Performance" heads a packed word cloud of this instructor's terms, none clipped or overlapping ("No feedback terms yet." when empty). The signature block prints "Prepared by:", "Checked and Verified:" and "Certified Proper and In Order:" with the names (in capitals) and titles noted in step 1.
	6. Go to the next page (OVERALL format). ***Expected:*** Title reads "STUDENTS' ASSESSMENT SURVEY FOR TEACHERS (SAST) INDIVIDUAL REPORT — OVERALL" with "AY 1ST SEM 2025-2026" style term line ("Semester" shortened, never doubled). Rows "Name of Instructor/Professor", "Course Taught" ("All subjects (N):" followed by the codes), "No. of Student-evaluators" and "Campus: ARGAO"; the "RANGE & Verbal Description (VD)" legend; the "I. Management" and "II. Performance" tables with "Mean" and "VD"; "*Comments made by the students are herewith attached."; "Summary Statistics" with "Management Mean (MM)" and "Performance Mean (PM)"; and "You are a/an" over the verbal description in capitals and "General Average x.xx". Figures equal the dashboard's for that term.
	7. Go through the remaining pages. ***Expected:*** One page per subject in the same format, without the "OVERALL" suffix, sorted by course. Each shows "Course Taught" as "CODE - Subject Name" and that subject's own N, criterion means and general average, matching its Subject Detail screen.
	8. Export for an instructor with results in only one subject that term. ***Expected:*** The PDF holds the comments page, the OVERALL page and one subject page, with matching figures and no empty pages.
Expected Result	The PDF holds a comments page, an OVERALL page and one page per subject in the official layout, every figure matches the app, the term is printed correctly, and the signatories are the ones set by the SAO Admin.
Actual Result (Pass/Fail)	PARTIAL – The download icon produced SAST_Report_Rodz_Harvey_d_Licayan.pdf (2 pages) in the share sheet.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**DESCRIPTIVE RATING EQUIVALENTS AND MISSING SCORES ACROSS SCREENS** Every screen and the PDF give the same verbal description for the same stored mean, and a missing mean is never shown as zero	
Revision	new	
Account Needed	Instructor with results; a second Instructor with no stored result for the active term; read access to the database	
Preconditions	Signed in as instructor with stored results in the active term.	
Test Data	View only. [overall_total_survey], [management_results], [performance_results], [overall_question_means]. By query: a stored mean exactly on a band edge (4.20, 3.40, 2.60 or 1.80) or the closest available, and a criterion with no answers (null mean).	
Steps	1. Note combined_score_mean for this instructor and term, then read the dashboard, My Subjects header, report summary and PDF "General Average". ***Expected:*** All show the same value to two decimals.	
	2. Compare the verbal description on the dashboard badge, the My Subjects pill, the report's VD code and the PDF's "You are a/an". ***Expected:*** All agree with the table 4.20-5.00 Outstanding (O), 3.40-4.19 Very Satisfactory (VS), 2.60-3.39 Satisfactory (S), 1.80-2.59 Fair (F), 1.00-1.79 Unsatisfactory (US).	
	3. Open the subject or criterion whose mean sits on a band edge. ***Expected:*** The edge value takes the HIGHER band (e.g. 3.40 is Very Satisfactory / VS, 3.39 is Satisfactory / S) on every screen and in the PDF.	
	4. Open the criterion with no answers in Subject Detail, the report and the PDF. ***Expected:*** The mean shows "—" and the VD "-", never "0.00" or "US".	
	5. Sign in as the instructor with no stored result for the active term and visit the dashboard, My Subjects, Official SAST Report, then export the PDF. ***Expected:*** Dashboard "—" with "No evaluation results yet"; My Subjects header "N/A" with the pill "No data"; the report shows "No evaluation results yet". The PDF prints "—" for every mean, "NO DATA" under "You are a/an", and the COMMENTS paragraph reads "No evaluation results yet."	
Expected Result	One rating rule is applied everywhere, band edges round up to the higher band, and missing scores read as "—", "N/A" or "No data", never as 0.00.	
Actual Result (Pass/Fail)	PARTIAL – The report and dashboard showed descriptive equivalents (Unsatisfactory, US) next to 2-decimal scores.	

Screenshot	
Comments / Attachments (Screenshots, Logs)	Missing-score handling not checked.

Test Case ID	TC013	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**ACTIVATION OF A PLACEHOLDER INSTRUCTOR ACCOUNT [DESTRUCTIVE]** An instructor first added during batch scanning gets a real login from the SAO Admin, sets a password and signs in with their results intact; a deactivated instructor is approved again	
Revision	new	
Account Needed	SAO Admin; a placeholder Instructor account (login placeholder-...@ievaluate.internal); the deactivated Instructor left by TC008 (step 9)	
Preconditions	A placeholder instructor exists with evaluation results attached. The person's real email inbox is reachable. The account from TC008 is disabled.	
Test Data	The instructor's real email (not yet used by any account). An email already used by another account. The password-reset code emailed in step 6. A new password meeting the reset rules, NOT recorded here. WARNING : Steps 5-9 approve accounts on the shared database and cannot be undone by the tester. Use a disposable placeholder record.	

Steps	1. As SAO Admin open the "Users" tab, find the placeholder instructor and open its menu. ***Expected:*** The menu item reads "Activate & Approve", not "Approve".
	2. Tap "Activate & Approve". ***Expected:*** A dialog titled "Activate account" shows the person's name and role / department, explains "This account was added without a real login, so it cannot be approved as is. ...", offers a field hinted "Person's real email", and buttons "Cancel" and "Activate & Approve".
	3. Submit a placeholder address, then an address used by another account. ***Expected:*** "Enter the person's real email address, not the placeholder"; then "This email address already belongs to another account. Use a different address." Nothing is changed.
	4. Tap "Cancel". ***Expected:*** The dialog closes and the account is still a placeholder.
	steps below change the shared database 5. Reopen the dialog, enter the real email and tap "Activate & Approve". ***Expected:*** The title changes to "Account activated" with "{Name} is approved and their login email is {email}." and "An email saying the SAO admin activated their account was sent to {email}. To set a password they open iEvaluate, tap "Forgot Password?", enter {email} and type the code that is emailed to them." (or a warning "The email to {email} could not be sent. Please give them the steps above in person."). "Done" closes it.
	6. As the instructor, on Login tap "Forgot Password?", enter the email, "Send Code", type the emailed code, "Verify Code", set a new password and tap "Update Password". ***Expected:*** The dialog passes "Reset Password", "Enter Code" and "Set New Password"; the Login screen then shows "Password updated successfully! Please log in with your new password."
	7. Sign in with the new password. ***Expected:*** The dashboard opens with the results that were attached to the placeholder, followed by the "Complete your information" dialog (continue with TC009).
	8. From a second SAO Admin screen that was open before step 5, try to activate the same account again. ***Expected:*** A warning beginning "Already activated" appears and only "Close" is offered; nothing is changed.
	9. As SAO Admin find the instructor deactivated in TC008, open its menu and tap "Approve", then sign in as that instructor. ***Expected:*** No activation dialog (the login is a real email). Snackbar reads "Account approved successfully". The instructor signs in with their existing password and their old scores are intact.
Expected Result	A placeholder instructor can only be approved together with a real, unused email; the person then sets a password and signs in with their results intact, and a deactivated instructor regains access once approved.
Actual Result (Pass/Fail)	NOT RUN – Placeholder activation was not run.
Screenshot	
Comments / Attachments (Screenshots, Logs)	Not run: changes shared data.

Test Case ID	TC014	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	**REGISTRATION AS AN INSTRUCTOR WITH THE COLLEGE PICKER** A new instructor registers through the four-step form, picking a college before a department, and waits for SAO approval	
Revision	new	
Account Needed	None to register (new applicant); SAO Admin to reject the test registration afterwards	
Preconditions	App on the Login screen. The [colleges] table is populated and departments carry a college_id; if not, the College field is absent and steps 3-5 are recorded as N/A.	
Test Data	A new name, address, University ID and institutional email not used by any account. One University ID and one email already registered. A password meeting the rules, NOT recorded here.	
Note	Step 9 creates a pending account. Ask the SAO Admin to reject it after the test.	

Steps	1. On Login tap "Register". ***Expected:*** The "Registration" screen opens on "Personal Information" with "I am registering as", "First Name", "Last Name", "House No. / Street / Purok" and "Barangay, Municipality, Province", and a "Continue" button. The role list includes "Instructor — Resident (Full-Time)" and "Instructor — Non-Resident (Part-Time)".
	2. Tap "Continue" with no role chosen. ***Expected:*** Refused with "Please choose what you are registering as".
	3. Choose "Instructor — Resident (Full-Time)", fill the names and address, and tap "Continue". ***Expected:*** "Academic Information" opens with "Registering as Instructor — Resident (Full-Time).", then "University ID", "Institutional Email", "Select College" and "Select Department". The department picker cannot be opened until a college is chosen.
	4. Fill the ID and email, leave the college empty, tap "Continue". ***Expected:*** Refused with "Please select a college".
	5. Pick a college and open the department list; then pick a different college. ***Expected:*** Only that college's departments are listed, with no college names among them. Changing the college clears the department.
	6. Type the already-registered ID and email, then the new ones. ***Expected:*** "This University ID is already registered" and "This email is already registered"; then "This University ID is available" and "This email is available".
	7. Choose a department, tap "Continue", and type a weak password, then a mismatched confirmation. ***Expected:*** "Create Password" lists "At least 8 characters", "One uppercase letter", "One number" and "One special character (! @ # - _ …)", ticking as each is met; a mismatch shows "Passwords do not match".
	8. Enter a valid password, tap "Continue", and try to tick the agreement before opening it. ***Expected:*** "Review & Terms" shows "Registering as", "Name", "Address", "Email", "Department" and "Employment" ("Resident (Full-Time)"). "I agree to the NDA and DPA" stays disabled with "Read the agreement above first" until "NDA and Data Privacy Agreement" is opened and read.
	9. Read the agreement, tick the box and tap "Register"; then try to sign in. ***Expected:*** "Registration Submitted!" reads "Your account is waiting for an SAO Administrator to approve it. ..." with "Return to Login". Signing in is refused with "Account pending admin approval."
Expected Result	A new instructor can register only with a college, a department of that college, a unique ID and email and a strong password, and the account waits for SAO approval.
Actual Result (Pass/Fail)	PARTIAL – Register > Instructor > Academic Information showed Select College above Select Department, Select Department disabled until a college was picked, and College of Technology and Engineering listed 3 departments.

Screenshot	
Comments / Attachments (Screenshots, Logs)	No registration submitted; screenshot shared with TC-A13.

USER ACCEPTANCE TESTING

DEFECT LOG - 31 AUGUST 2026

```
Ordered most severe first. Statuses are as of the 31 August 2026 run; notes
dated 2026-11-01 say where the 2026-10-28 build changed the affected code.

--------------------------------------------------------------------------------
DEF-01  The word "Semester" is printed twice on the official report
        SEVERITY: HIGH        STATUS: FIXED 31/08/2026, PENDING RE-TEST
--------------------------------------------------------------------------------
  The exported PDF read "Academic Year: 1st Semester Semester 2025-2026". The
  report screen had the same fault, hidden only because the field is truncated
  there (DEF-03).

  ROOT CAUSE, CONFIRMED IN CODE
  The codebase documents its own contract in
  lib/core/services/system_settings_service.dart lines 11-12: "semester" is a
  label that ALREADY includes the word, e.g. "1st Semester", and
  "academicYear" is just "2025-2026". Two things broke that contract:

    1. Both places that compose the field inserted the word a second time:
         lib/instructor/detailed_report_screen.dart:358
         lib/core/services/pdf/pdf_service.dart:288
       Each read '$term Semester $academicYear'.
    2. lib/instructor/past_semesters_screen.dart:421-422 split the combined
       label "1st Semester 2025-2026" on the FIRST space, producing
       term="1st" and academicYear="Semester 2025-2026".

  All three entry points into the report were affected, because the dashboard
  passes term="2nd Semester" and the department-head page does the same.

  FIX APPLIED
    - Both composition sites now read '$term $academicYear', since the term
      already carries the word.
    - Past Terms now splits on the LAST token via two new helpers,
      _semesterOf() and _academicYearOf(), giving term="1st Semester" and
      academicYear="2025-2026" as the contract requires.
    - "flutter analyze" reports no issues on all three files.

  NOTE 2026-11-01: the PDF was rebuilt (commit e2d7ee3) in the official
  two-format layout. It prints "Term" and "Academic Year" as separate fields
  and "AY 1ST SEM 2025-2026" on the other pages, so the PDF no longer
  composes the two at all.

  STILL TO DO: re-run TC006 step 3 (screen) and TC006 step 8 with TC011
  steps 3 and 6 (PDF) on the 2026-10-28 build.

--------------------------------------------------------------------------------
DEF-02  Word cloud clips words at the panel edge
        SEVERITY: MEDIUM      STATUS: FIXED 31/08/2026, PENDING RE-TEST
--------------------------------------------------------------------------------
  In "AI Word Cloud" the rotated term "Fair grading" ran past the right edge of
  the dark panel and was cut off mid-word, so it could not be read.

  Because the cloud reshuffles on every load, WHICH word was clipped changed
  between refreshes, making this intermittent rather than tied to one term.

  ROOT CAUSE, CONFIRMED IN CODE
  Nothing bounded a word to the panel. The words sit in a Wrap inside a
  fixed-padding Container, and each word was a bare Text with no width
```

constraint, so a word wider than the panel simply overflowed it. Rotated words are the ones most at risk: RotatedBox swaps the constraints it passes down, so a rotated word's own text width becomes its vertical extent, and neither extent was capped.

FIX APPLIED
- The word area is now wrapped in a LayoutBuilder, so the panel's real inner width is known at layout time.
- Every word is bounded by ConstrainedBox(maxWidth: that width) and drawn through FittedBox(fit: BoxFit.scaleDown), so a word too wide to fit is rendered slightly smaller instead of running off the edge. scaleDown only ever reduces, so no word grows beyond the size its count earned it.
- The same bound sits inside RotatedBox, where the swapped constraints make it cap the rotated word's height. Both extents are now bounded, so clipping is impossible by construction rather than by luck of the shuffle.
- "flutter analyze" reports no issues on the file.

NOTE 2026-11-01: the Wrap-based cloud above was later replaced by a packed, deterministic word cloud shared with the PDF (lib/core/widgets/packed_word_cloud.dart, brand colours since commit 2b8c355). Each word sits in its own box and is scaled down to fit; a word that cannot be placed is left out. The cloud no longer reshuffles.

STILL TO DO: re-run TC004 step 7 and TC010 steps 6-7 on the 2026-10-28 build.
File: lib/instructor/student_feedback_screen.dart

DEF-03 Report header fields are truncated on screen
SEVERITY: MEDIUM STATUS: FIXED 31/08/2026, PENDING RE-TEST

On "Official Evaluation Report" (now titled "Official SAST Report") the identity fields were cut off:
- "Instructor Name: Rodz..."
- "Academic Year: 1st Se..."
- "Department: College o..."

The instructor could not confirm from the screen that the report was about them or which term it covered.

The exported PDF was NOT affected: it renders "Rodz Harvey Licayan" and "College of Technology and Engineering" in full. So this was a layout constraint in the on-screen header, not bad data.

ROOT CAUSE, CONFIRMED IN CODE
_headerField rendered the value with overflow: TextOverflow.ellipsis on a single line, and the header places TWO of these side by side in one Row - so each field had only half the screen width to work with. On a phone that is not enough for a full name plus its label, so every long value was cut.

FIX APPLIED
- The value now wraps (softWrap: true, no ellipsis) instead of being cut, and the Row is top-aligned so a wrapped value sits correctly beside its label.
- The field grows downward by a line or two on a narrow screen. That is the right trade: this block exists so the instructor can confirm the report is theirs, so being complete matters more than being one line tall.
- "flutter analyze" reports no issues on the file.

STILL TO DO: rebuild the app and re-run TC006 step 3, confirming all four fields read in full.
File: lib/instructor/detailed_report_screen.dart

DEF-04 Direct Quotes counter sits flush against the screen edge
SEVERITY: LOW STATUS: FIXED 31/08/2026, PENDING RE-TEST

The "N Comments" counter beside the "Direct Quotes" heading reached the right edge of the display with no padding. At the tested count it stayed readable, but a wider value or a larger system font size would have clipped it.

ROOT CAUSE, CONFIRMED IN CODE
The heading and the counter sat in a spaceBetween Row as two unconstrained

Text widgets. Neither could yield, so once the pair exceeded the row width the counter was pushed off the end rather than the heading giving way.

FIX APPLIED
- Both sides are now Flexible with a 12px gap between them, and the counter is end-aligned, so the heading yields first and the number is never cut.
- "flutter analyze" reports no issues on the file.

STILL TO DO: re-run TC004 step 8, ideally once at the largest system font size the device offers.
File: lib/instructor/student_feedback_screen.dart

DEF-05 Avatar initials differ between the drawer and Settings
SEVERITY: LOW STATUS: FIXED 31/08/2026, PENDING RE-TEST

The same signed-in instructor was shown as "RH" in the side drawer but "RL" on the Settings profile card, so the account appeared to belong to two different people depending on the screen.

ROOT CAUSE, CONFIRMED IN CODE
The two screens composed the initials from different things. The drawer took the first TWO WORDS of the full display name, so "Rodz Harvey Licayan" gave "RH" - the middle name. Settings used first_name + last_name and gave "RL".

FIX APPLIED
- The drawer now uses a new _initialsOf() helper that takes the FIRST and LAST word of the name, skipping any middle name, so it produces "RL" and agrees with Settings. A single-word name yields one letter, and an empty name still yields "?".
- Settings was already correct and is unchanged.
- "flutter analyze" reports no issues on the file.

STILL TO DO: re-run TC007 step 1 and confirm the drawer and the Settings profile card show the same two letters.
File: lib/core/navigation/main_scaffold.dart

DEF-06 Older PDF exports carry malformed filenames
SEVERITY: LOW STATUS: NEEDS CONFIRMATION

The device's Downloads folder holds earlier exports named:
SAST_Report_....pdf (truncated name leaked into filename)
SAST_Report_Instructor.pdf (fell back to the literal word)
SAST_Report_Rodz_Harvey__Licayan.pdf (doubled underscore)

NOT REPRODUCED ON THIS BUILD. The 31 August export was named correctly, so this may already be fixed, or may depend on how quickly the export is triggered after the profile loads. Export twice more, once immediately after opening the report, before closing this off.

Affects TC006 step 7 and TC011 step 2.

DEF-07 Unreachable screen in the instructor module
SEVERITY: LOW (code hygiene) STATUS: OPEN

---

lib/instructor/term_subjects_screen.dart is never instantiated anywhere in the codebase. Past Terms renders its own subject list inline instead. It is dead code, so no acceptance test can cover it. Either wire up an entry point or remove the file. Still true on the 2026-10-28 build.

ONE SUSPECTED DEFECT WAS INVESTIGATED AND WITHDRAWN

The Performance Trend chart first appeared to be missing the active term, because its newest VISIBLE bar was "1st 26-27" while the dropdown read "2nd Semester 2027-2028". Scrolling the chart to its right end showed the term is present and correctly selected, so the chart works as intended.

Recorded here because the same misreading is easy to repeat: THE CHART
SCROLLS HORIZONTALLY, AND THE NEWEST TERMS SIT OFF-SCREEN UNTIL SCROLLED.

USER ACCEPTANCE TESTING

WHAT CHANGED FROM THE PREVIOUS VERSIONS OF THIS DOCUMENT

AGAINST THE 4-CASE VERSION OF 26 AUGUST 2026

1. EXPECTED RESULTS WERE WRONG ON THREE OF FOUR CASES. The old TC001-TC003 all ended with "The account is created successfully and the user is redirected to the login page" - a registration outcome carried into three view-only screens. Each case now states the outcome its own steps produce.

2. A LIVE PASSWORD WAS PRINTED IN THE TEST DATA. The old TC004 listed a working credential in a document circulated to panelists. Credentials are now referred to but never written down.

3. THE DOWNLOAD STEP POINTED AT THE WRONG SCREEN. The old TC002 step 4 checked for a download control on Past Terms, where none exists. It now runs in TC006 against the report screen's app bar.

4. EVERY STEP CARRIES ITS OWN EXPECTED RESULT, so a failure identifies the step rather than giving one verdict for the whole scenario.

5. FAILURE PATHS ARE TESTED, NOT JUST HAPPY PATHS - rate limiting, deactivated-account sign-in, password rules, and wrong or expired codes. The old version recorded Pass on every case with no negative testing.

6. RESULTS ARE NO LONGER PRE-FILLED. Only cases actually executed carry a verdict; the rest say NOT EXECUTED and why.

AGAINST THE 14-CASE VERSION OF 31 AUGUST 2026

7. THE SAME COVERAGE IS NOW EIGHT CASES INSTEAD OF FOURTEEN.
   Nothing was dropped. Cases that tested one screen from two angles, or the read and write halves of one screen, were folded together, so the document reads as one case per screen or flow. Where a merged case mixes a passing read path with an unexecuted write path, the split is stated in the Actual Result and marked in the steps.

OLD CASE	NOW
TC001 valid sign-in	TC001 steps 1-4
TC002 sign-in failure paths	TC001 steps 5-9
TC003 dashboard overview	TC002 steps 1-5
TC004 dashboard sync / notices / term	TC002 steps 6-9
TC005 my subjects	TC003 steps 1-4
TC006 subject detail	TC003 steps 5-10
TC007 feedback tone and AI insights	TC004 steps 1-6
TC008 word cloud and quote filters	TC004 steps 7-11
TC009 past terms	TC005
TC010 official report and PDF	TC006
TC011 settings profile / notification	TC007 steps 1-7
TC012 email and password	TC007 steps 8-11
TC013 self-deactivation	TC008 steps 7-11
TC014 sign out	TC008 steps 1-6

   Defect cross-references were renumbered with the cases. Every DEF- number is unchanged, so anything already citing a defect still matches.

8. SIGN-OUT IS NOW TESTED BEFORE DEACTIVATION.
   They share a case, and deactivation locks the account. Running sign-out first means the destructive step is genuinely last.

AGAINST THE 8-CASE VERSION OF 31 AUGUST 2026 (REVISED 1 NOVEMBER 2026)

9. THE DOCUMENT NOW FOLLOWS THE BUILD OF 2026-10-28 (COMMIT 926b836).
   TC001-TC008 keep their IDs and order but were all updated: renamed screens
   ("Official SAST Report", "Student Feedback" header), "—" instead of 0.00
   for missing means, "x of y answered" counts, student interpretation and
   bullet theme cards, the fixed packed word cloud, the new PDF layout, new
   validation messages, and the profile dialog after sign-in. The 31/08 run
   results moved to each case's Comments; Actual Result is blank again.

10. SIX NEW CASES: TC009 forced profile completion, TC010 student
    interpretation / insight bullets / brand word cloud, TC011 two-format
    official PDF, TC012 rating equivalents and missing scores, TC013
    placeholder-account activation and re-approval, TC014 registration with
    the college picker.

11. EVERY CASE NAMES ITS ACCOUNTS ("Account Needed"), and the cases that
    change the shared database for good are marked [DESTRUCTIVE]: TC008 and
    TC013.

12. TWO EXPECTATIONS WERE CORRECTED FOR BEHAVIOUR THAT DID NOT CHANGE: a
    deactivated login is banned in Auth, so TC001 step 8 and TC008 step 11
    now expect "This account has been suspended. Please contact the SAO
    office."; and the SAST Guidelines screen was confirmed to be reachable
    only by SAO Admin and SAO Staff, so it has no instructor case.

SUMMARY

```
  THIS REVISION (1 NOVEMBER 2026, BUILD OF 2026-10-28, COMMIT 926b836)
  Total cases                : 14
    Unchanged                : 0
    Updated                  : 8   (TC001-TC008)
    Removed                  : 0
    New                      : 6   (TC009-TC014)
  Marked [DESTRUCTIVE]       : 2   (TC008, TC013)
  Executed on this build     : 0   - the new run is PENDING

  PREVIOUS RUN (31 AUGUST 2026, OLDER BUILD, 8 CASES) - now in Comments
  Passed                     : 2   (TC003, TC005)
  Failed                     : 2   (TC004, TC006)
  Partly executed            : 3   (TC001, TC002, TC007)
  Not executed               : 1   (TC008)

  Defects raised             : 7
    Fixed, pending re-test   : 5   (DEF-01, DEF-02, DEF-03, DEF-04, DEF-05)
    Open                     : 1   (DEF-07, dead code, no test can cover it)
    Needs confirmation       : 1   (DEF-06, not reproduced on that build)
  Suspected defects withdrawn: 1   (Performance Trend chart)

  Every screen an instructor can reach has a case. The 31 August verdicts are
  history, not results for this build: a fix in code is not a passed test,
  and TC004 and TC006 turn green only once the tester re-runs them on the
  2026-10-28 build and signs for it.

--------------------------------------------------------------------------------
RE-TEST CHECKLIST - WHAT TURNS THE TWO FAILURES GREEN
--------------------------------------------------------------------------------
  Use the build of 2026-10-28 (commit 926b836). The fixes are NOT in the build
  that was tested on 31 August.

  TC004 step 7  AI Word Cloud - every word fully readable, and the layout
                stays the same after two pull-to-refreshes.        [DEF-02]
  TC010 st 6-7  Same cloud: brand colours, no clipping, no movement. [DEF-02]
  TC004 step 8  "N Comments" counter fully on screen, not against the
                edge. Worth one pass at the largest system font size.  [DEF-04]
  TC006 step 3  Report header - "Instructor Name:", "Instructor ID:",
                "Academic Year:" and "Department:" all read in full.   [DEF-03]
  TC006 step 8  Exported PDF prints the term correctly, "Semester" never
  TC011 st 3,6  doubled ("Term" / "Academic Year"; "AY 1ST SEM ..."). [DEF-01]
  TC007 step 1  Drawer initials match the Settings profile card.       [DEF-05]

  If each behaves as written, update that case's Actual Result and verdict, and
  move the defect from PENDING RE-TEST to CLOSED with the re-test date.
