USER ACCEPTANCE TESTING - DEPARTMENT HEAD MODULE

=====

Capstone Project Title : iEvaluate: An AI-Driven Mobile Instructor Evaluation
and Performance Analysis System Using N8n Workflow
Automation

Team : ERMM
Project Leader : Rodz Harvey Licayan
Front-End Programmer : Michael Thomas Gonzaga
QA Engineer : Mark Lawrence Medillo
Technical Writer : Evangeline Caruana
Role under test : DEPARTMENT_HEAD / DEAN ("Department Head")
Device : Infinix X6525, Android 13
Active term : 2nd Semester, 2027-2028
Test account : the department head account held by the tester.
Credentials are deliberately NOT recorded here.

WHAT THIS ROLE DOES

The Department Head reviews the faculty in their OWN department, spots who is struggling, and takes formal action through an intervention report. Two properties matter more than anything cosmetic:

1. SCOPE - a head sees only their own department, never the whole college.
2. EFFECT - an intervention they raise reaches the instructor, and an instructor cannot dismiss it.

This role can also deactivate an instructor's account, so that path is tested explicitly.

HOW TO READ THIS DOCUMENT

- * Text in "double quotes" appears on screen exactly as written.
- * Names in [square brackets] are database tables or services to check when a step needs back-end verification.
- * Each step has its own expected result, so a failed case identifies WHICH step failed.
- * "Actual Result" is blank where the case has not been run.

!! WARNING !!

Cases marked [LIVE DATA] create real intervention records against real instructors, or deactivate a real account. Run them on staging, or on a throwaway instructor account, and never during a live evaluation period. TC-D08 (deactivating an instructor) is the highest-impact action in this module.

SCREEN COVERAGE

SCREEN	REACHED BY	CASE
Overview	Tab "Overview"	TC-D01
Faculty Roster	Tab "Faculty"	TC-D02
Instructor Detail	Tap a faculty row	TC-D03, D08, D09
Subject Analytics	Tab "Subjects"	TC-D07
Intervention Reports	Tab "Reports"	TC-D04, D06
Executive Settings (cross-role)	Drawer "Account Settings" Instructor's dashboard	TC-D10 TC-D05

USER ACCEPTANCE TESTING

Test Case ID	TC-D01	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SIGN IN AS DEPARTMENT HEAD AND READ THE EXECUTIVE OVERVIEW	
Preconditions	App on the Login screen. Account is active with role DEPARTMENT_HEAD or DEAN, and IS assigned to a department.	
Test Data	View only. Tables [department_table], [user_info].	
Steps	1. Sign in with the department head credentials. Expected: Routes to the department head landing screen, NOT the instructor or admin dashboard. Bottom tabs read "Overview", "Faculty", "Subjects", "Reports".	
	2. Confirm the role boundary. Expected: There is NO route to any SAO Admin screen - no Users, no Personnel, no System Settings. A head who can reach an admin screen is a FAIL.	
	3. Read the header and leadership area. Expected: Shows "Executive Overview" / "Department Overview" and identifies the department this head leads, under "Department Leadership".	
	4. Read the summary figures. Expected: Shows "Department Average", "Active Faculty" and "Total Forms Processed". The average is qualified by "Based on N of M faculty", so a partly-evaluated department is not mistaken for a complete one.	
	5. Confirm the department average only covers THIS department. Expected: The figure reconciles with this department's instructors only. No instructor from another department contributes.	
	6. Read "Department Growth". Expected: Subtitle reads "Weighted mean across recent academic terms." with a value per term. With no history it reads "No historical data available yet".	
	7. Read "Department Voice (AI Analysis)". Expected: Subtitle reads "Aggregated themes from all student comments across the college." With no data it reads "No feedback data yet for this term."	
	8. Read the "Action Required" section. Expected: Subtitle reads "Faculty and curriculum signals that need review." With nothing flagged it reads "No critical issues detected."	
	9. Sign in as a department head with NO department assigned. Expected: The screen explains the account has no department rather than showing an empty or misleading dashboard, and does not crash.	
Expected Result	The head lands on their own overview with no admin access, and every figure is scoped to their department alone.	
Actual Result (Pass/Fail)		

Comments / Attachments (Screenshots, Logs)	Step 5 is the substance of this case. A head seeing another department's figures is a confidentiality failure, not a cosmetic bug. Step 7's subtitle says "across the college" while the rest of the screen is department-scoped. Confirm with the team which is intended - if the AI analysis really is college-wide on a department screen, the wording or the scope is wrong.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	FACULTY ROSTER - SEARCH, SORT AND FLAGGED FACULTY	
Preconditions	Signed in as department head with several instructors in the department, at least one scoring below the intervention threshold.	
Test Data	View only. Table [user_info] filtered by department.	
Steps	1. Open the "Faculty" tab. Expected: Screen titled "Faculty Roster". While loading it reads "Loading faculty roster..."; with none it reads "No instructors yet" and "Faculty assigned to this department will appear here."	
	2. Confirm who is listed. Expected: ONLY instructors assigned to this head's department. Cross-check against [user_info] for that department ID.	
	3. Read one faculty row. Expected: Shows the instructor's name, "Overall Score", "Total Evals" and a sentiment split across "Positive", "Neutral" and "Negative".	
	4. Find an instructor scoring below the threshold. Expected: They carry an "Intervention Required" marker, so a head can spot who needs attention without reading every score.	
	5. Type a partial name into "Search instructor name...". Expected: The list narrows to matching instructors. Searching by university ID also works.	
	6. Search for a name that does not exist. Expected: Reads "No matching instructors" and "Try a different name or university ID." - not a blank screen.	
	7. Tap "Clear Search". Expected: The full roster returns.	
	8. Search for an instructor who belongs to ANOTHER department. Expected: They are NOT found. Search must not reach outside the department.	
	9. Apply each sort option: "Name (A-Z)", "Score (Highest to Lowest)", "Score (Lowest to Highest)". Expected: Each reorders the list correctly, and the sort survives a search being applied and cleared.	
	10. Tap a faculty row. Expected: The instructor detail page opens for that person.	
Expected Result	The roster lists only this department's faculty, flags who needs intervention, and search and sort work without ever exposing another department's staff.	
Actual Result (Pass/Fail)		

Comments / Attachments (Screenshots, Logs)	Step 8 is the confidentiality check.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	INSTRUCTOR DETAIL - PERFORMANCE AND SENTIMENT	
Preconditions	An instructor with evaluation data is open from the roster.	
Test Data	View only. Tables [overall_total_survey], [management_results], [student_remarks], [instructor_subjects].	
Steps	1. Open an instructor from the roster. Expected: The profile loads (briefly "Loading instructor profile...") and names the instructor.	
	2. Read the score summary. Expected: Shows "Management", "Performance" and "Evaluations" for the active term.	
	3. Cross-check those figures against what the INSTRUCTOR sees on their own dashboard. Expected: Both roles report the SAME numbers for the same instructor and term. A discrepancy here undermines every conversation the head will have with that instructor.	
	4. Read "Performance Trend". Expected: Subtitle reads "Historical score across all evaluation terms" with a value per term. With none it reads "No historical data available."	
	5. Read the "Sentiment Analysis" area. Expected: Shows "Comment Polarity Distribution" across "Positive", "Neutral", "Negative" / "Critical", plus "Key Sentiment Tags".	
	6. Cross-check the sentiment split against [student_remarks] for that instructor and term. Expected: The percentages reflect the stored tone values.	
	7. Read the subject list. Expected: The instructor's subjects for this term are listed. With none it reads "No subjects this term" and "Assigned subjects will appear here when available."	
	8. Confirm every verbal description matches its band. Expected: "Outstanding" >=4.20, "Satisfactory" >=2.60, and so on, matching the same bands used elsewhere in the app.	
	9. Open an instructor with no evaluations yet. Expected: Reads "No Data Yet" / "No data" rather than showing zeros as if they were real scores.	
Expected Result	The head sees a complete and accurate picture of one instructor, and every figure agrees with what that instructor sees themselves.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 3 is the important one. Two roles disagreeing about the same instructor's score is a serious data defect.

USER ACCEPTANCE TESTING

Test Case ID	TC-D04	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	DRAFT AN INTERVENTION REPORT [LIVE DATA]	
Preconditions	Signed in as department head. One flagged instructor, ideally a throwaway account. Table [intervention_reports], written via [evaluation_service].	
Test Data	One intervention against a throwaway instructor.	
Steps	1. Open the "Reports" tab. Expected: Screen titled "Intervention Reports" with "Manage formal actions and track support for flagged faculty." While loading it reads "Loading interventions..."	
	2. Read the pending and history areas. Expected: Pending items appear under a "Pending Action Required" heading; resolved ones under "Intervention Log". With nothing pending it reads "All caught up" and "No pending interventions require action."; with no history, "No intervention history" and "Completed and resolved interventions will appear here."	
	3. Read a flagged alert. Expected: Shows "Instructor:" and "Flagged for:" with the reason, plus the date it was flagged, so the head knows why the system raised it.	
	4. Tap "Draft Intervention Report" (also reachable from the Faculty Roster). Expected: A form opens to record a formal action against that instructor.	
	5. Open the action-type selector. Expected: The available actions include "Peer Mentoring Program", "Pedagogy & Teaching Workshop", "Curriculum Review Meeting", "Faculty Support", "Mandated Action" and "Formal Administrative Warning".	
	6. Submit the form with no action type chosen. Expected: Refused. A formal record must state what action was mandated.	
	7. Complete the form with an action and notes, then submit. Expected: Message reads "Intervention recorded successfully." and it appears in the pending list marked "PENDING".	
	8. Submit an intervention with the notes left empty. Expected: Either it is refused, or the record clearly reads "No notes provided." rather than showing an empty gap.	
	9. Confirm the record in [intervention_reports]. Expected: One row exists, naming the correct instructor, the acting head as author, the action type, and the creation date.	
	10. Open "Intervention Report Details" on the new record. Expected: Shows "Action:", the notes, "Created:" with the date, and the instructor's name.	
	11. Draft a second intervention for the SAME instructor. Expected: Handled sensibly - either allowed as a separate record or refused with a reason. It must not create a corrupt or duplicate row.	

Expected Result	A formal intervention can be raised against a flagged instructor with a mandated action type recorded, and it is stored and listed as pending.
Actual Result (Pass/Fail)

USER ACCEPTANCE TESTING

Test Case ID	TC-D05	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	THE INSTRUCTOR RECEIVES THE INTERVENTION [CROSS-ROLE, LIVE DATA]	
Preconditions	The intervention from TC-D04 exists. A SECOND device signed in as that instructor, with their dashboard open.	
Test Data	The intervention raised in TC-D04. WHY THIS CASE EXISTS An intervention that the instructor never sees is useless, and one the instructor can delete is not a formal record. This case tests both halves of that, across two roles at once.	
Steps	1. With the instructor's dashboard already open and NOT restarted, raise the intervention from the head's device. Expected: The instructor's dashboard updates by itself. The app subscribes to live changes on [intervention_reports], so no manual refresh or restart should be needed.	
	2. Read what appears on the instructor's dashboard. Expected: A card headed "Official Notice — Action Required" appears at the top, showing "From:", "Action:" and "Notes:", plus the date.	
	3. Confirm the content matches what the head submitted. Expected: The action type and notes are exactly what was recorded in TC-D04, attributed to the correct department head.	
	4. Read the instructor's notification bell. Expected: A count badge appears, and the bell reports the active notice rather than staying silent.	
	5. As the INSTRUCTOR, attempt to dismiss, delete or hide the notice. Expected: There is NO such control. A lock icon carries the tooltip "Only your department head can remove this notice".	
	6. Restart the instructor's app. Expected: The notice is still there. It is not a transient message.	
	7. Confirm a DIFFERENT instructor does not see this notice. Expected: The notice appears only for the instructor it was raised against.	
Expected Result	An intervention raised by the head reaches the correct instructor live, states what was mandated and by whom, persists across restarts, and cannot be removed by the instructor.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	This is the single most important case in the module, because it is the only one that proves the intervention feature actually does its job end to end. Steps 5 and 7 are the integrity checks.	
Tester Name / Date

USER ACCEPTANCE TESTING

Test Case ID	TC-D06	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	RESOLVE AN INTERVENTION [LIVE DATA]	
Preconditions	The pending intervention from TC-D04 exists. The instructor's device is available to observe the effect.	
Test Data	That intervention.	
Steps	1. On the "Reports" tab, open the pending intervention. Expected: It is marked "PENDING" and offers "Mark as Resolved".	
	2. Tap "Mark as Resolved". Expected: A confirmation is required before a formal record changes state.	
	3. Confirm the action. Expected: Message reads "Intervention marked as resolved." and it moves from the pending list into the "Intervention Log".	
	4. Confirm the pending area updates. Expected: With nothing else outstanding it reads "All caught up".	
	5. On the INSTRUCTOR's device, observe their dashboard. Expected: The "Official Notice — Action Required" card is removed, or is clearly shown as resolved. A resolved intervention must not keep demanding action from the instructor.	
	6. Confirm the record still exists in history. Expected: The resolved intervention remains in the "Intervention Log" as a historical record. Resolving is not deleting.	
	7. Confirm the instructor still cannot alter it. Expected: The instructor has no control over the resolved record either.	
Expected Result	A pending intervention can be resolved behind a confirmation, the instructor's notice clears, and the record is retained in history rather than deleted.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 6 matters for auditability. A resolved intervention that disappears entirely destroys the department's record of action taken.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SUBJECT ANALYTICS - CURRICULUM HEALTH	
Preconditions	Signed in as department head with evaluated subjects in the active term.	
Test Data	View only. Table [instructor_subjects] and the results tables.	
Steps	1. Open the "Subjects" tab. Expected: Screen titled "Subject Analytics". While loading it reads "Loading curriculum analytics..."; with none it reads "No subject data" and "Analytics will appear after this term receives evaluations." 2. Read the "Subject Health" section. Expected: Subtitle reads "Performance patterns that may require review or teaching support." with a row per subject. 3. Read one subject row. Expected: Shows "Avg Score" and a comparison under "Score vs. Department Average", including "Dept Avg:" so the head can see whether a subject is above or below the department. 4. Confirm the subjects listed belong to this department. Expected: No subject from another department appears. 5. Read the flag categories on a problem subject. Expected: Flags distinguish the KIND of problem - "Curriculum", "Difficulty", "Sentiment", "System Anomaly", "Critical" - rather than a single undifferentiated warning. 6. Confirm a "System Anomaly" flag means what it says. Expected: It indicates a data problem, e.g. an implausible or incomplete result, not a teaching problem. A data fault must not be presented to a head as poor teaching. 7. Tap a subject row ("Tap to view instructor breakdown"). Expected: An "Instructor Performance Breakdown" opens showing who teaches that subject and how each performs. 8. Cross-check one subject's average against its instructors' scores for that subject. Expected: The figures reconcile.	
Expected Result	Subject-level analytics are scoped to the department, distinguish curriculum problems from data anomalies, and reconcile with the per-instructor figures.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 6 is worth settling with the team. A head acting on a "System Anomaly" as if it were a performance problem could lead to an unfair intervention.

	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	DEACTIVATE AN INSTRUCTOR ACCOUNT [LIVE DATA]	
Preconditions	A THROWAWAY instructor account in this department that can currently sign in. Arrange reactivation with an SAO admin beforehand.	
Test Data	That account's credentials, held by the tester. !! HIGHEST-IMPACT ACTION IN THIS MODULE !! A department head can lock an instructor out of the system. Only an SAO admin can reverse it. Never run this against a real instructor.	
Steps	1. Open a throwaway instructor from the roster and find "Deactivate Account". Expected: The control is present but not something that fires on a single stray tap.	
	2. Tap it. Expected: A dialog titled "Deactivate Account?" appears, asking "Are you sure you want to deactivate {instructor name}", naming the actual instructor so the wrong person cannot be deactivated by accident.	
	3. Cancel the dialog. Expected: Nothing changes and the account still signs in.	
	4. Confirm with "Deactivate". Expected: Message reads "Account deactivated successfully." and the instructor is shown as deactivated.	
	5. Attempt to sign in as that instructor. Expected: Refused with "Your account has been deactivated by the administration." They reach no screen inside the app.	
	6. Confirm the instructor's evaluation data survives. Expected: Scores and remarks are retained. This is a deactivation, not a deletion.	
	7. Confirm the action was recorded. Expected: The deactivation appears in the SAO admin's "Security Audit Logs", attributed to this department head. A head deactivating an account with NO audit trail is a serious accountability gap.	
	8. Attempt to deactivate an instructor from ANOTHER department. Expected: Not possible. A head's authority stops at their own department.	
	9. Force a failure, e.g. deactivate with no network. Expected: Message reads "Failed to deactivate." and the account is NOT left half-deactivated.	
	10. Have an SAO admin reactivate the account. Expected: Succeeds, and the instructor can sign in again.	
Expected Result	A head can deactivate an instructor in their own department behind a named confirmation, the account is then locked out, its data survives, the action is audited, and it can be reversed by an admin.	
Actual Result (Pass/Fail)		

Comments / Attachments (Screenshots, Logs)	OPEN QUESTION FOR THE TEAM: this flow appears to have NO emailed verification code, whereas the SAO admin needs one to create a privileged account. Deactivating a colleague's account is comparably consequential. Confirm whether the absence of a code here is a deliberate design decision. If it is not, raise it as a defect. Step 10 is mandatory - leave the account as you found it.

USER ACCEPTANCE TESTING

Test Case ID	TC-D09	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	VIEW AN INSTRUCTOR'S OFFICIAL EVALUATION REPORT	
Preconditions	An instructor with evaluation data is open from the roster.	
Test Data	View and export.	
Steps	1. From the instructor detail page, open their official evaluation report. Expected: The screen titled "Official Evaluation Report" opens for THAT instructor.	
	2. Check the header identity fields. Expected: "Instructor Name:", "Instructor ID:", "Academic Year:" and "Department:" are filled for the instructor being viewed - not for the department head who is viewing it.	
	3. Check the "Academic Year:" field specifically. Expected: It reads the term ONCE, e.g. "2nd Semester 2027-2028". The word "Semester" must NOT appear twice.	
	4. Verify the summary table and both criterion tables. Expected: "N" / "MANAGEMENT" / "PERFORMANCE" / "OVERALL" with VD codes, and sections "I. Management" and "II. Performance" each listing ten criteria.	
	5. Cross-check the figures against the instructor detail page. Expected: The report and the detail page agree.	
	6. Download the PDF. Expected: A PDF is written and the share sheet opens. Its contents match the screen, and its "Academic Year" also reads correctly.	
	7. Confirm the report is for the correct term. Expected: The academic year matches the term the head is reviewing, not a different one.	
Expected Result	The head can open and export the correct instructor's official report, with identity and term fields rendered correctly in both the screen and the PDF.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 3 exists because of DEF-01, found on 31/08/2026 in the instructor module: the report printed "1st Semester Semester 2025-2026". The report screen and PDF builder are SHARED with this role, so the department head path had the same fault. A fix was applied on 31/08/2026 (detailed_report_screen.dart, pdf_service.dart, past_semesters_screen.dart) but has NOT yet been verified on a rebuilt app. Step 3 is the re-test.

Test Case ID	TC-D10	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	EXECUTIVE SETTINGS - PROFILE, ALERTS AND SECURITY	
Preconditions	Signed in as department head, Settings opened from the drawer. Access to the account's inbox.	
Test Data	A new password of at least six characters, NOT recorded in this document.	
Steps	1. Open "Account Settings" from the drawer. Expected: Screen titled "Executive Settings" (briefly "Loading executive settings..."), showing "Executive Profile" and identifying the role as "Dept Head" with the department and "College".	
	2. Tap "Edit Personal Details" / "Edit Executive Profile", change the name and save. Expected: The profile saves and the new name appears in the drawer header.	
	3. Find the "Executive Intelligence" section. Expected: Subtitle reads "Choose which department signals should notify you." with two toggles: "Alert when instructor rating drops below 3.0." and "Alert on detected negative student feedback."	
	4. Toggle each alert off, leave Settings, and return. Expected: Both settings persist. On failure the message reads "Failed to update" naming the setting, rather than silently reverting.	
	5. With the rating alert ON, arrange for an instructor to fall below 3.0. Expected: The head is alerted, and the instructor appears flagged on the roster and under "Action Required".	
	6. With the rating alert OFF, repeat. Expected: No alert is raised, confirming the toggle actually controls behaviour rather than only appearing to.	
	7. Tap "Edit Email" and submit a valid new address. Expected: Reads "Enter your new email address. You will receive a confirmation link.", then "Email updated! Check your inbox for confirmation." The old address works until the link is clicked.	
	8. Tap "Edit Password" and submit mismatched passwords. Expected: Refused with a mismatch message.	
	9. Submit a valid new password with the WRONG current password. Expected: Refused. The password does not change.	
	10. Submit a fully valid password change. Expected: Succeeds and the session ends, requiring a fresh sign-in. On failure it reads "Failed to update password."	
	11. Open "Deactivate My Account", then CANCEL. Expected: A warning explains the account can only be restored by the SAO Admin, and cancelling leaves the account active.	
Expected Result	The head can maintain their own profile, the two alert toggles genuinely control whether they are notified, and every password rule is enforced.	

Actual Result (Pass/Fail)	
Comments / Attachments (Screenshots, Logs)	Steps 5 and 6 are the real test. A settings toggle that saves but changes nothing is a common and easily missed defect.

USER ACCEPTANCE TESTING

SUMMARY

Total cases : 10
Executed : 0
Not executed : 10

Cases that change live data : TC-D04, D05, D06, D08
Highest-risk case : TC-D08 (deactivating an instructor)
Cross-role case : TC-D05 (needs a second device)

WHAT THIS DOCUMENT EXISTS TO PROVE

1. A head sees ONLY their own department (TC-D01/5, D02/2, D02/8)
2. A head cannot reach any SAO Admin screen (TC-D01/2)
3. Head and instructor agree on the same scores (TC-D03/3)
4. An intervention reaches the instructor live (TC-D05/1,2)
5. An instructor cannot remove an intervention (TC-D05/5)
6. A resolved intervention is kept, not deleted (TC-D06/6)
7. Deactivating an instructor is confirmed, audited, scoped, and reversible (TC-D08)
8. Alert toggles actually change behaviour (TC-D10/5,6)

Items 1 and 2 are confidentiality. Items 4 to 6 decide whether the intervention feature works at all. Item 7 is accountability. Treat failures in those ahead of anything cosmetic.

TWO OPEN QUESTIONS FOR THE TEAM, both raised in the cases above:

- a) TC-D08 - a department head can deactivate an instructor with no emailed verification code, while an SAO admin needs one to create a privileged account. Is that asymmetry intended?
- b) TC-D01 - "Department Voice (AI Analysis)" is subtitled "across the college" on an otherwise department-scoped screen. Is the scope or the wording wrong?

CARRIED OVER FROM THE INSTRUCTOR UAT

DEF-01 (the word "Semester" printed twice on the official report) affected this role too, because the report screen and PDF builder are shared. A fix was applied on 31/08/2026 but is NOT yet verified on a rebuilt app.
TC-D09 step 3 is the re-test for this role.
