USER ACCEPTANCE TESTING - SAO ADMINISTRATOR MODULE

=====

Capstone Project Title : iEvaluate: An AI-Driven Mobile Instructor Evaluation
and Performance Analysis System Using N8n Workflow
Automation

Team : ERMM
Project Leader : Rodz Harvey Licayan
Front-End Programmer : Michael Thomas Gonzaga
QA Engineer : Mark Lawrence Medillo
Technical Writer : Evangeline Caruana
Role under test : SAO_ADMIN ("SAO Administrator")
Device : Infinix X6525, Android 13
Active term : 2nd Semester, 2027-2028
Test account : the SAO admin account held by the tester.
Credentials are deliberately NOT recorded here.

HOW TO READ THIS DOCUMENT

- * Text in "double quotes" appears on screen exactly as written. Match it character for character.
 - * Names in [square brackets] are database tables or edge functions to check when a step needs back-end verification.
 - * Each step has its own expected result, so a failed case identifies WHICH step failed.
 - * "Actual Result" is blank where the case has not been run.
- !! DESTRUCTIVE-ACTION WARNING !!
- This role can create accounts, change roles, disable users, switch the active term for the whole system, and rotate credentials. Cases marked [LIVE DATA] change real records. Run them on staging, or on throwaway accounts you are willing to lose, and never during a live evaluation period.

SCREEN COVERAGE

SCREEN	REACHED BY	CASE
Dashboard	Tab "Dashboard"	TC-A01
Pending Approvals	Dashboard "View All"	TC-A02
Users	Tab "Users"	TC-A03,A04,A05

USER ACCEPTANCE TESTING

Test Case ID	TC-A01	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SIGN IN AS SAO ADMINISTRATOR AND READ THE SYSTEM OVERVIEW	
Preconditions	App on the Login screen. Account is active with role SAO_ADMIN.	
Test Data	View only.	
Steps	1. Sign in with the SAO administrator credentials. Expected: Routes to the admin landing screen titled "Dashboard", NOT any other role's dashboard. Bottom tabs read "Dashboard", "Users", "Personnel", "Analytics".	
	2. Read the header card. Expected: Shows "SAO ADMINISTRATION", "System Overview" and the subtitle "Operations, evaluation progress, and account activity."	
	3. Read the health strip. Expected: Shows "Automation" and "Database", each with a status indicator, plus a refresh control. Both read healthy when n8n and Supabase are reachable.	
	4. Read the two counters. Expected: A count labelled "Total Users" and a count labelled "Files Scanned" for the current term. Both are numbers, not blank or "null".	
	5. Cross-check "Total Users" against [user_info] / [Sao_users]. Expected: The figure equals the number of registered accounts.	
	6. Cross-check "Files Scanned" against the scan/survey records for the active term. Expected: The figure equals the count gathered this term, and changes only when the term changes or new scans arrive.	
	7. Turn off Wi-Fi and mobile data, then tap the health-strip refresh. Expected: The affected indicator reports a problem rather than silently staying green. The app does not crash.	
Expected Result	The admin lands on the System Overview, and both the health indicators and the two counters reflect the real state of the system.	
Actual Result (Pass/Fail)	PASS on steps 1-4 (observed 31/08/2026). Dashboard rendered with "SAO ADMINISTRATION" / "System Overview" / "Operations, evaluation progress, and account activity.", the health strip showing "Automation" and "Database" both healthy, "17 Total Users" and "152 Files Scanned this term", and the four tabs Dashboard / Users / Personnel / Analytics. Steps 5-7 not executed.

USER ACCEPTANCE TESTING

Test Case ID	TC-A02	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	APPROVE A PENDING ACCOUNT REGISTRATION [LIVE DATA]	
Preconditions	At least one account has registered and is awaiting approval.	
Test Data	One throwaway registration. Edge function [admin-accept-user]. Tables [user_info], [Sao_users].	
Steps	1. On the dashboard, find the "Pending Approvals" section. Expected: Subtitle reads "Review new accounts before granting access." with a "View All" link. Pending registrations are listed.	
	2. When there are no pending registrations, read the empty state. Expected: Reads "All caught up" rather than an empty gap or a spinner that never resolves.	
	3. Tap a pending account. Expected: Full details open, showing "Email Address", "Employment Status", "Academic Dept", "Address" and "Registered On". Fields with no value read "Not provided", not blank or "null".	
	4. Confirm the requested role is shown and is the role the person actually registered for. Expected: The role label matches the registration, e.g. "SAO Staff (Data Gatherer)", "SAO Administrator", "Department Head", "Instructor".	
	5. Tap "Approve". Expected: The account is approved via [admin-accept-user], the row leaves the pending list, and the user count on the dashboard increases by one.	
	6. Have the approved person sign in. Expected: They can now sign in and land on the dashboard for the role they were approved as, and no other.	
	7. Force a failure (approve with no network) and observe. Expected: Message reads "Action failed. Please try again." and the account is NOT left half-approved: it either stays pending or is fully approved, never both.	
Expected Result	A pending registration can be reviewed in full and approved, after which the person can sign in with exactly the role they were approved for, and a failed approval leaves no partial state.	
Actual Result (Pass/Fail)

USER ACCEPTANCE TESTING

Test Case ID	TC-A03	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	CREATE AN ACADEMIC USER, INCLUDING THE DEPARTMENT HEAD AUTHORIZATION CODE [LIVE DATA]	
Preconditions	Signed in as SAO admin on the "Users" tab. Access to the admin's email inbox for the verification code.	
Test Data	A throwaway name and email. Edge functions [send-admin-code], [admin-create-user].	
Steps	1. Open the "Users" tab. Expected: Screen lists academic users. While loading it reads "Loading academic users..."; with none it reads "No academic users found."	
	2. Tap "Add Academic Personnel" (or "Create User"). Expected: A form opens with "First Name", "Last Name", an email field, a role selector and a department selector.	
	3. Submit the form with required fields left empty. Expected: Refused with a validation message. No account is created.	
	4. Create a plain INSTRUCTOR account with valid details. Expected: The account is created without asking for a code, and appears in the list.	
	5. Now create an account with the role DEPARTMENT HEAD. Expected: BEFORE creating anything the app states "Creating a Department Head requires authorization." and asks "Enter the 6-digit code sent to your email.". A code arrives by email.	
	6. Enter an INCORRECT 6-digit code. Expected: Refused. NO Department Head account is created.	
	7. Enter the CORRECT code. Expected: The Department Head account is created and appears in the list.	
	8. Repeat step 5 but cancel at the code prompt. Expected: No account is created and no partial record is left behind.	
	9. Force a server failure during creation. Expected: Message reads "Could not create the user. Please try again." and no partially-created account is left.	
Expected Result	Ordinary instructor accounts can be created directly, while creating a Department Head is gated behind a correct emailed 6-digit code, and every refusal leaves no partial account.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	This is the most security-relevant case in the module. The privilege escalation guard is the thing being tested, not the form.

	Technical Writer:	Evangeline Caruana
Title / Business Scenario	DISABLE AND RE-ENABLE AN ACADEMIC ACCOUNT [LIVE DATA]	
Preconditions	A throwaway academic account exists and can currently sign in.	
Test Data	That account's credentials, held by the tester.	
Steps	1. On the "Users" tab, open the throwaway account and tap "Disable". Expected: A confirmation is required before anything changes.	
	2. Confirm the action. Expected: Message reads "Account disabled successfully" (or the equivalent wording for the new status) and the row shows the account as disabled.	
	3. Attempt to sign in as that disabled account. Expected: Sign-in is refused with "Your account has been deactivated by the administration." The user reaches no screen inside the app.	
	4. Confirm the account's evaluation data still exists. Expected: Disabling is NOT a deletion. Scores and remarks are retained.	
	5. Re-enable the same account from the "Users" tab. Expected: Status returns to active with a success message.	
	6. Sign in as that account again. Expected: Sign-in now succeeds and lands on the correct role's dashboard.	
Expected Result	An account can be disabled and re-enabled by the admin, a disabled account cannot sign in, and no evaluation data is lost either way.	
Actual Result (Pass/Fail)

Title / Business Scenario	ASSIGN A SECOND DEPARTMENT TO AN INSTRUCTOR [LIVE DATA]	
Preconditions	An instructor account exists with one primary department.	
Test Data	A second department that already exists.	
Steps	1. On the "Users" tab, open an instructor and tap "Assign Second Dept". Expected: A sheet opens headed "Assign Second Department" with the instructor's name, and shows "Current secondary departments:" and "Add a new secondary department:".	
	2. Add a second department. Expected: It appears under "Current secondary departments:" and persists after closing and reopening the sheet.	
	3. Try to add the SAME department twice. Expected: The duplicate is refused rather than listed twice.	
	4. Remove the secondary department. Expected: It disappears from the list. On failure the message reads "Error removing dept:" rather than failing silently.	
	5. Force a failure while assigning. Expected: Message reads "Error assigning department. Please try again." and no half-assignment is left.	
	6. Confirm the instructor's PRIMARY department is unchanged throughout. Expected: Adding or removing a secondary department never alters the primary one.	
Expected Result	Secondary departments can be added and removed without duplicates and without ever disturbing the primary department.	
Actual Result (Pass/Fail)

Title / Business Scenario	CREATE SAO PERSONNEL, INCLUDING THE ADMIN AUTHORIZATION CODE [LIVE DATA]	
Preconditions	Signed in as SAO admin on the "Personnel" tab. Access to the admin's inbox.	
Test Data	A throwaway name and email. Edge functions [send-admin-code], [admin-create-user].	
Steps	1. Open the "Personnel" tab. Expected: Screen titled "Personnel Management". While loading it reads "Loading SAO personnel..."; with none it reads "No SAO personnel".	
	2. Read one personnel row. Expected: Shows the person's role and activity, including "Last Upload", or "No uploads yet" when they have never uploaded.	
	3. Tap "Add SAO Personnel", then submit with fields empty. Expected: Refused with "Please fill in all required fields".	
	4. Fill the details but choose no role, then submit. Expected: Refused with "Please select a role first".	
	5. Create an account with role SAO_STAFF. Expected: Created without a code, with "Personnel created!", and the row appears in the list.	
	6. Now create an account with role SAO_ADMIN. Expected: The app states "Creating an Admin requires authorization." and asks "Enter the 6-digit code sent to your email:". A code arrives by email.	
	7. Enter an INCORRECT code. Expected: Refused. NO admin account is created.	
	8. Enter the CORRECT code. Expected: The admin account is created and appears in the list.	
	9. Have the new SAO_STAFF account sign in. Expected: They land on the Data Gatherer screen with tabs "Dashboard", "Scanner", "Validation", "Sync Queue" - and have NO access to admin screens such as Users, Personnel or System Settings.	
	10. Edit an existing person via "Edit Personnel Profile" and save. Expected: Message reads "Personnel updated successfully!" and the change is visible in the list.	
	11. Force a server failure during creation. Expected: Message reads "Could not create the personnel. Please try again." and no partial account is left.	
Expected Result	SAO staff accounts can be created directly, creating another SAO Administrator is gated behind a correct emailed 6-digit code, and a new staff account is confined to the gatherer screens.	
Actual Result (Pass/Fail)		

Comments / Attachments (Screenshots, Logs)	Step 9 is the privilege-boundary check. A staff account that can reach any admin screen is a FAIL for the whole case.

	Technical Writer:	Evangeline Caruana
Title / Business Scenario	ANALYTICS - UNIVERSITY-WIDE PERFORMANCE	
Preconditions	Signed in as SAO admin with evaluation data in the active term.	
Test Data	View only.	
Steps	1. Open the "Analytics" tab. Expected: The screen loads without error and shows performance figures for the active term.	
	2. Confirm the term the figures belong to. Expected: The screen states which term it is reporting on, and it is the active term set in System Settings.	
	3. Cross-check a department's average against that department's instructors. Expected: The department figure is consistent with its instructors' scores, and no instructor from another department is included.	
	4. Confirm every verbal description matches its score band. Expected: >=4.20 Outstanding, >=3.40 Very Satisfactory, >=2.60 Satisfactory, >=1.80 Fair, otherwise Unsatisfactory.	
	5. Switch the active term in System Settings, return, and re-read. Expected: The figures follow the newly active term.	
Expected Result	Analytics reports the correct term, and every figure and band reconciles with the underlying evaluation data.

Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SUBJECT MANAGEMENT - BULK IMPORT AND MANUAL ADD [LIVE DATA]	
Preconditions	Drawer item "Subject Management" is reachable. The n8n bulk import workflow is running. A Google Sheet of subject assignments is prepared for the active term.	
Test Data	One prepared sheet, plus one manual subject. Webhook URL comes from the env var for subject bulk import.	
Steps	1. Open the drawer and tap "Subject Management". Expected: The screen lists subject assignments for the active term and states which term that is.	
	2. Use the search box and the assigned/unassigned filter. Expected: Search narrows the list, and the filter separates subjects that have an instructor from those that do not.	
	3. Add ONE subject manually with valid details. Expected: It is created and appears in the list against the active term.	
	4. Add the SAME subject again. Expected: The duplicate is refused rather than creating a second identical assignment.	
	5. Run "Import from Google Sheets" with the prepared sheet. Expected: The import runs via the n8n webhook, reports progress, and ends with a clear success or failure message - never an indefinite spinner.	
	6. Cross-check the imported rows against the sheet. Expected: Every row in the sheet is either imported or reported as an error. Nothing is silently dropped.	
	7. Deliberately include a bad row (unknown instructor, unknown subject) and re-import. Expected: The bad row does NOT import silently. It appears under "Import Errors" (TC-A10).	
	8. Run the import with n8n stopped. Expected: A clear failure message. No partial import is left behind.	
	9. Attempt to delete a subject that already has evaluation results. Expected: Deletion is BLOCKED. Results already recorded against a subject cannot be orphaned.	
Expected Result	Subjects can be added manually and in bulk, duplicates and bad rows are reported rather than silently dropped, and a subject carrying results cannot be deleted.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 9 corresponds to the assignment-protection migration (20240130000015_protect_assignments_with_results). Confirm the migration is applied to the environment before judging.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	DEPARTMENT MANAGEMENT - ADD AND EDIT [LIVE DATA]	
Preconditions	Drawer item "Manage Departments" is reachable.	
Test Data	One throwaway department code and name.	
Steps	1. Open "Manage Departments". Expected: Screen titled "Department Management" with "Add or edit departments". While loading it reads "Loading departments..."; with none it reads "No departments yet". A counter reads "All Departments (n)". 2. Tap "Add Department" and submit with fields empty. Expected: Refused. "Department Code *" and "Department Name *" are marked required, with the rule "At least 3 characters". 3. Enter a valid code and name, then submit. Expected: A confirmation appears reading "Are you sure you want to add" with the department named, and a "Confirm Add" button. Nothing is created until it is confirmed. 4. Confirm the addition. Expected: Message reads "Department added successfully" and the new department appears, with the counter increasing by one. 5. Add a department with an existing code. Expected: Refused with "Department already exists". No duplicate row. 6. Edit the department via "Edit Department" and save. Expected: Message reads "Department updated successfully" and the change shows in the list. 7. Open a department to view its detail. Expected: Shows "Department Overview", its "Department Head" (or "No department head assigned"), "Instructors (n)" and "Dept. Average". 8. Look for a way to DELETE a department. Expected: There is NO delete control. Departments are add/edit only, so an existing department cannot be removed out from under the instructors and results attached to it.	
Expected Result	Departments can be added behind an explicit confirmation and edited freely, duplicates are refused, and no delete path exists.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 8 asserts intended behaviour, not a missing feature. If a delete control HAS appeared, that is a regression against the no-delete decision.

	Technical Writer:	Evangeline Caruana
Title / Business Scenario	IMPORT ERRORS - TRIAGE AND FIX	
Preconditions	At least one import has produced errors, e.g. from TC-A08 step 7.	
Test Data	View, plus one correction.	
Steps	1. Open the drawer and tap "Import Errors". Expected: Screen titled "Import Errors". While loading it reads "Loading import issues...".	
	2. Read the three tabs. Expected: Tabs read "All (n)", "Instructor (n)" and "Subject (n)", and the two sub-counts add up to the "All" count.	
	3. Read an error row. Expected: Shows the reason - "Instructor Not Found" or "Subject Not Found" - together with the "Student ID", "Subject" and "Instructor" from the failed row, so the admin can tell WHICH record failed and why.	
	4. Tap "Fix This" on an error. Expected: A correction path opens that lets the admin resolve the mismatch. It does not dead-end.	
	5. Resolve the error, then return to the list. Expected: The resolved row leaves the list and the tab counts decrease.	
	6. Tap "Refresh" with no errors outstanding. Expected: Reads "No pending errors" and "All imported records matched successfully."	
Expected Result	Every failed import row is visible with its reason and enough detail to identify it, can be corrected, and leaves the list once resolved.	
Actual Result (Pass/Fail)

	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SECURITY AUDIT LOGS	
Preconditions	Some administrative actions have been performed, e.g. the account creation and disabling from TC-A03 and TC-A04.	
Test Data	View only.	
Steps	1. Open the drawer and tap "Security Audit Logs". Expected: Screen titled "Security Audit Logs". While loading it reads "Loading security history..."; with no entries it reads "No security events" and "Audit activity will appear here as administrative actions occur."	
	2. Confirm the actions from earlier cases are recorded. Expected: The account creation (TC-A03) and the disable (TC-A04) both appear as entries. An administrative action that leaves NO audit entry is a FAIL.	
	3. Read one entry. Expected: Shows what happened, who did it ("By {name}") and when, plus the acting admin's email.	
	4. Expand an entry's metadata. Expected: A "METADATA (JSON):" block shows the detail of the action.	
	5. Toggle the sort control. Expected: Switches between "Showing Newest First" and "Showing Oldest First", and the list order actually changes to match.	
	6. Confirm no entry can be edited or deleted from the app. Expected: The log is append-only from the admin's point of view. An audit trail the admin can rewrite is worthless.	
Expected Result	Every administrative action is recorded with actor, action and timestamp, the log can be re-sorted, and it cannot be altered from within the app.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 2 and step 6 are the substance of this case. The rest is presentation.

Title / Business Scenario	LIVE SYSTEM METRICS	
Preconditions	Drawer item "Live System Metrics" is reachable.	
Test Data	View only.	
Steps	1. Open the drawer and tap "Live System Metrics". Expected: The screen loads and shows current system figures without error.	
	2. Compare the figures with the dashboard counters. Expected: Where the two screens report the same thing, they agree.	
	3. Perform an action that should move a metric, e.g. approve an account, then return. Expected: The metric reflects the change after a refresh.	
	4. Disable the network, then open the screen. Expected: It reports that data is unavailable rather than showing stale figures as if they were live, and does not crash.	
Expected Result	The metrics screen reports current figures that agree with the dashboard, and degrades honestly when offline.	
Actual Result (Pass/Fail)

USER ACCEPTANCE TESTING

Test Case ID	TC-A13	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SYSTEM SETTINGS - SWITCH THE ACTIVE ACADEMIC TERM [LIVE DATA]	
Preconditions	Drawer item "System Settings" is reachable. A second device or account signed in as an instructor, to observe the effect.	
Test Data	Edge function [update-system-settings]. Table [system_settings]. !! HIGHEST-IMPACT ACTION IN THE SYSTEM !! Switching the term changes what every dashboard, report and evaluation in the application points at, for every user. Do not run this during a live evaluation period.	
Steps	1. Open "System Settings" and find the "Academic Term" section. Expected: Shows the current "Active Semester" and "Academic Year", and states that "Changes apply to every dashboard, report, and evaluation."	
	2. Select a different term and submit. Expected: A confirmation step titled "Confirm Term Change" appears. The term does NOT change until it is confirmed.	
	3. Cancel at the confirmation. Expected: The active term is unchanged everywhere.	
	4. Confirm the change. Expected: The new term is saved via [update-system-settings] and the screen shows the new active term.	
	5. Return to the admin Dashboard and Analytics. Expected: Both now report the newly active term, with figures for that term.	
	6. On the instructor device, WITHOUT restarting the app, observe the instructor's screens. Expected: Feedback, Past Terms, My Subjects and Subject Detail all reload themselves onto the new term.	
	7. Attempt the change with the edge function unavailable. Expected: A clear failure is reported, e.g. "Edge Function not found or offline:", and the active term is NOT left half-changed.	
	8. Switch the term back to the original. Expected: Succeeds, and every screen returns to reporting the original term.	
Expected Result	The active term changes only after an explicit confirmation, propagates to every role without a restart, and a failure leaves the previous term intact.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 8 is mandatory. Leave the system on the term it started on.

Test Case ID	TC-A14	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	ADMIN'S OWN ACCOUNT SECURITY, INCLUDING ROLE CHANGE VERIFICATION [LIVE DATA]	
Preconditions	Signed in as SAO admin on "System Settings", with access to the admin's inbox.	
Test Data	A new password of at least six characters, NOT recorded in this document. Edge functions [send-admin-code], [admin-update-role]. !! WARNING !! Steps 6-9 change this admin's own role. Getting it wrong can lock you out of the admin module. Have a second SAO_ADMIN account available first.	
Steps	1. Find the "Administrator Profile" section and tap "Edit Personal Details". Expected: An "Edit Admin Profile" form opens with the name fields, and saves successfully.	
	2. Tap "Edit Email", submit a valid new address. Expected: Message reads "Email updated! Check your inbox for confirmation." The old address keeps working until the link is clicked.	
	3. Tap "Edit Password" and submit mismatched passwords. Expected: Refused with "Passwords do not match."	
	4. Submit a valid new password with the WRONG current password. Expected: Refused with "Current password is incorrect." The password does not change.	
	5. Submit a fully valid password change. Expected: Succeeds and the session is ended, requiring a fresh sign-in with the new password.	
	6. Attempt to change your own administrative role. Expected: The app states "Changing your administrative role requires identity verification." and asks "Enter the 6-digit code sent to your email:". Only "SAO_ADMIN" and "SAO_STAFF" are offered.	
	7. Enter an INCORRECT code. Expected: Refused. The role does NOT change.	
	8. Enter the CORRECT code and change the role to SAO_STAFF. Expected: The role changes via [admin-update-role], and on next sign-in the account lands on the Data Gatherer screens with no access to admin screens.	
	9. Using the SECOND admin account, change the first account back to SAO_ADMIN. Expected: Succeeds, and the first account regains admin access.	
	10. Find "Deactivate My Account" and open it, then CANCEL. Expected: A warning appears explaining the account can only be restored by an SAO Admin, and cancelling leaves the account fully active.	
Expected Result	The admin can maintain their own profile, every password rule is enforced, and changing an administrative role is gated behind a correct emailed 6-digit code.	
Actual Result (Pass/Fail)		

Comments / Attachments (Screenshots, Logs)	Step 6 is the important one. A role change that succeeds WITHOUT the code is a critical security failure and should be raised immediately.

USER ACCEPTANCE TESTING

SUMMARY

Total cases : 14
Executed : 1 partial (TC-A01 steps 1-4, observed 31/08/2026)
Not executed : 13

Cases that change live data : TC-A02, A03, A04, A05, A06, A08, A09, A13, A14
Highest-risk cases : TC-A13 (system-wide term switch)
TC-A14 (own role change)

SECURITY GUARDS THIS DOCUMENT EXISTS TO VERIFY

1. Creating a Department Head requires an emailed 6-digit code (TC-A03)
 2. Creating an SAO Administrator requires an emailed code (TC-A06)
 3. Changing an administrative role requires an emailed code (TC-A14)
 4. A new SAO_STAFF account cannot reach any admin screen (TC-A06/9)
 5. Every administrative action lands in the audit log (TC-A11/2)
 6. Departments cannot be deleted (TC-A09/8)
 7. Subjects with results cannot be deleted (TC-A08/9)
- If any one of these fails, record it as a defect before anything cosmetic.
