USER ACCEPTANCE TESTING - SAO STAFF (DATA GATHERER) MODULE

=====

CEBU TECHNOLOGICAL UNIVERSITY - ARGAO CAMPUS
COLLEGE OF TECHNOLOGY AND ENGINEERING
Information Technology Department
USER ACCEPTANCE TESTING - SAO STAFF (DATA GATHERER) MODULE

=====

Capstone Project Title : iEvaluate: An AI-Driven Mobile Instructor Evaluation
and Performance Analysis System Using N8n Workflow
Automation

Team : ERMM
Project Leader : Rodz Harvey Licayan
Front-End Programmer : Michael Thomas Gonzaga
QA Engineer : Mark Lawrence Medillo
Technical Writer : Evangeline Caruana
Role under test : SAO_STAFF ("SAO Staff (Data Gatherer)")
Device : Infinix X6525, Android 13
Active term : 2nd Semester, 2027-2028
Test account : the SAO staff account held by the tester.
Credentials are deliberately NOT recorded here.

WHAT THIS ROLE DOES

The SAO Staff member is the person who physically scans completed paper SAST
evaluation forms into the system. Their work is a pipeline:
scan a form -> it queues locally -> it uploads to n8n ->
anything n8n cannot read is flagged -> staff corrects it -> it syncs
This document tests that pipeline, because that is where the role's real work
and its real risk of data loss sit. Everything else is secondary.

HOW TO READ THIS DOCUMENT

-
- * Text in "double quotes" appears on screen exactly as written.
 - * Names in [square brackets] are database tables, edge functions or n8n webhooks to check when a step needs back-end verification.
 - * Each step has its own expected result.
 - * "Actual Result" is blank where the case has not been run.
- !! DATA-LOSS WARNING !!
- A scanned form represents a real student's evaluation that exists on paper only once. Cases marked [LIVE DATA] upload or discard real records. The single most important property in this whole module is that A SCAN IS NEVER SILENTLY LOST. Several cases below exist only to prove that.
-

SCREEN COVERAGE

SCREEN	REACHED BY	CASE
Dashboard	Tab "Dashboard"	TC-S01
Scanner	Tab "Scanner"	TC-S02, TC-S03
Sync Queue	Tab "Sync Queue"	TC-S04, TC-S05
Validation	Tab "Validation"	TC-S06
Failed Scans	Validation -> "Failed Scans"	TC-S07
Google Sheet Import	Dashboard "IMPORT FROM GOOGLE SHEETS"	TC-S08
Settings	Drawer / Settings tab	TC-S09

USER ACCEPTANCE TESTING

Test Case ID	TC-S01	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SIGN IN AS SAO STAFF AND READ THE SHIFT DASHBOARD	
Preconditions	App on the Login screen. Account is active with role SAO_STAFF.	
Test Data	View only.	
Steps	1. Sign in with the SAO staff credentials. Expected: Routes to the gatherer screen titled "Dashboard", with tabs "Dashboard", "Scanner", "Validation" and "Sync Queue".	
	2. Confirm the role boundary. Expected: There is NO route to any SAO Admin screen - no Users, no Personnel, no System Settings, no Security Audit Logs. A staff account that can reach an admin screen is a FAIL.	
	3. Read the term shown in the app bar. Expected: It is the active term set by the SAO admin.	
	4. Read the "Shift Activity" section. Expected: Subtitle reads "Live database and local queue totals." with four counters: "ENTRIES TODAY / submitted today", "PENDING / not yet synced", "SUCCESS / synced this session", and the overall survey count "gathered this term".	
	5. Confirm each counter means what its label says. Expected: ENTRIES TODAY counts today's submissions; PENDING counts scans held locally and not yet uploaded; SUCCESS counts uploads in this session; the term counter matches the "Files Scanned" figure on the SAO admin dashboard for the same term.	
	6. Scan one form (see TC-S02), then return to the dashboard. Expected: PENDING increases by one. After a successful sync, PENDING falls and SUCCESS rises.	
Expected Result	The staff member lands on their own dashboard with no admin access, and the four shift counters track the real state of the local queue and the database.	
Actual Result (Pass/Fail)	PASS on steps 1, 3 and 4 (observed 31/08/2026). Dashboard showed the term "2nd Semester, 2027-2028", "Shift Activity" with "Live database and local queue totals.", the counters "0 ENTRIES TODAY / submitted today", "0 PENDING / not yet synced", "0 SUCCESS / synced this session" and "152 ... gathered this term", plus the "IMPORT FROM GOOGLE SHEETS" button and the four tabs. The term count of 152 MATCHES the "152 Files Scanned" on the SAO admin dashboard, so step 5's cross-check passes for that counter. Steps 2 and 6 not executed.

USER ACCEPTANCE TESTING

Test Case ID	TC-S02	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SCAN A COMPLETED FORM - HAPPY PATH [LIVE DATA]	
Preconditions	On the "Scanner" tab. Camera permission granted. One completed paper SAST form. Good lighting and a plain background.	
Test Data	One real completed form. Note its Student ID and instructor before scanning, so the result can be checked.	
Steps	1. Open the "Scanner" tab for the first time. Expected: The app requests camera permission. Granting it starts the preview; refusing it shows a clear explanation, not a black screen.	
	2. Read the on-screen guidance. Expected: Shows "FIT SHORT BOND PAPER INSIDE THE FRAME" (or LONG, matching the selected size), "Leave a gap between paper and frame edges", and "Hold steady - Plain background - Good lighting".	
	3. Select the paper size matching the form. Expected: "Short Bond" and "Long Bond" are both selectable, and the frame guidance updates to the chosen size.	
	4. Hold the device in landscape. Expected: The app asks for portrait, reading "PLEASE HOLD PORTRAIT" and "The scanner works best in upright mode". It does not capture a sideways image.	
	5. Align the form in the frame and hold still. Expected: Status progresses through "FOCUSING..." and "HOLD STEADY..." to "TAP TO CAPTURE".	
	6. Tap to capture. Expected: The image is taken and analysed, showing "ANALYZING SHARPNESS...".	
	7. Accept the capture with "USE PHOTO". Expected: The scan is accepted and added to the local queue. The dashboard "PENDING" counter increases by one.	
	8. Confirm the scan is queued BEFORE any upload. Expected: The scan exists locally even with no network. It is not lost if the app is closed before syncing.	
Expected Result	A well-presented form can be captured with clear guidance throughout, and the accepted scan is stored locally before any upload is attempted.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 8 is the data-safety guarantee. If a captured scan can vanish because the network was down, that is the most serious defect this module can have.

USER ACCEPTANCE TESTING

Test Case ID	TC-S03	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SCANNER REJECTS POOR CAPTURES [NEGATIVE CASE]	
Preconditions	On the "Scanner" tab with a paper form.	
Test Data	One form, deliberately mis-presented.	
Steps	1. Deliberately move the device while capturing, or capture out of focus. Expected: The app warns "IMAGE APPEARS BLURRY" rather than accepting an unreadable scan.	
	2. Confirm what happens after a blur warning. Expected: The staff member can retake the photo. A blurry image is not silently queued for upload.	
	3. Tilt the device noticeably while aiming. Expected: The app shows the tilt angle and "HOLD STRAIGHT", warning before capture.	
	4. Present the form far too small in the frame, or overlapping the frame edges. Expected: The guidance about fitting the paper inside the frame with a gap remains visible, and a badly framed capture is discouraged.	
	5. Cover the camera completely and capture. Expected: The app reports a problem rather than queueing a black image.	
	6. Revoke camera permission in Android settings, then reopen the Scanner tab. Expected: A clear message explains the camera is unavailable and how to restore it. The app does not crash.	
	7. Trigger a camera fault, e.g. open another camera app simultaneously. Expected: The failure is reported to the user, not swallowed silently.	
Expected Result	Every unusable capture is refused or clearly warned about before it enters the queue, and camera faults are reported rather than hidden.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	The purpose of this case is that GARBAGE NEVER ENTERS THE PIPELINE. A blurry scan that uploads becomes a failed scan someone has to chase later.

USER ACCEPTANCE TESTING

Test Case ID	TC-S04	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SYNC QUEUE - UPLOAD PENDING SCANS [LIVE DATA]	
Preconditions	At least two scans are queued locally from TC-S02. Network available. The n8n workflow is running.	
Test Data	The queued scans. n8n webhook URL from its env var.	
Steps	1. Open the "Sync Queue" tab. Expected: Screen headed "Sync Queue" with "Review and upload scanned forms." and an "Upload Pipeline" section. Each queued scan is listed.	
	2. With nothing queued, read the empty state. Expected: Reads "Everything is synced" and "New scans will appear here before upload."	
	3. Confirm the queue count matches the dashboard. Expected: The number of queued items equals the dashboard "PENDING" counter.	
	4. Tap "Sync All Pending". Expected: Status shows "Syncing..." and progresses. It does not hang indefinitely with no feedback.	
	5. Wait for the upload to finish. Expected: Successfully uploaded scans leave the queue. The dashboard "PENDING" falls and "SUCCESS" rises by the number uploaded.	
	6. Verify the uploaded data landed in the database for the correct term and instructor. Expected: Each scan's scores are recorded against the right instructor, subject and term - the ones printed on the paper form.	
	7. Sync again immediately with an empty queue. Expected: Handled gracefully. No duplicate records are created.	
	8. Scan the SAME physical form twice and sync both. Expected: The duplicate is either rejected or flagged for review, NOT silently counted twice. Double-counting corrupts an instructor's scores.	
Expected Result	Queued scans upload with visible progress, leave the queue only on success, land against the correct instructor and term, and duplicates are not silently counted.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 8 matters most for score integrity. Confirm the intended behaviour with the team before judging it pass or fail.

USER ACCEPTANCE TESTING

Test Case ID	TC-S05	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	SYNC QUEUE - FAILURES, PAUSE AND REMOVAL [NEGATIVE, LIVE DATA]	
Preconditions	At least two scans queued. Ability to disable the network and to stop the n8n workflow.	
Test Data	The queued scans.	
Steps	1. Disable all network, then tap "Sync All Pending". Expected: The upload fails with a clear message such as "Upload failed". The scans REMAIN in the queue. Nothing is lost.	
	2. Re-enable the network and sync again. Expected: The same scans upload successfully. No scan was dropped by the earlier failure.	
	3. Stop the n8n workflow, then sync. Expected: The failure is reported. The scans stay queued rather than being marked as sent.	
	4. Restart n8n and sync. Expected: The scans upload successfully.	
	5. Send a payload n8n rejects, e.g. an unreadable image. Expected: The scan is not silently dropped. It either stays queued or moves to "Failed Scans" (TC-S07) where it can be recovered.	
	6. Find the pause control and pause syncing. Expected: Status shows "Sync Paused" and no further uploads are attempted while paused.	
	7. Resume syncing. Expected: Uploads continue from where they left off.	
	8. Tap "Remove from queue" on one scan. Expected: A confirmation appears reading "Remove from queue?". Nothing is removed until confirmed.	
	9. Cancel that confirmation. Expected: The scan stays in the queue.	
	10. Confirm the removal. Expected: The scan leaves the queue, and the "PENDING" counter falls by one.	
	11. Force-close the app with scans still queued, then reopen it. Expected: The queued scans are STILL THERE. The queue survives an app restart.	
Expected Result	Every upload failure leaves the scans safely queued, syncing can be paused and resumed, removal requires confirmation, and the queue survives an app restart.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Steps 1, 5 and 11 are the core of this case. A scan lost to a network failure or an app restart is unrecoverable, because the paper form has already been handled and set aside.

USER ACCEPTANCE TESTING

Test Case ID	TC-S06	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	VALIDATION - CORRECT FLAGGED RECORDS [LIVE DATA]	
Preconditions	At least one uploaded scan has been flagged, typically because the instructor name could not be matched.	
Test Data	One flagged record, with the paper form on hand to check against.	
Steps	1. Open the "Validation" tab. Expected: Screen shows "Flagged Records". While loading it reads "Loading flagged records..."; with none it reads "No pending verification" and "All records are linked to an instructor."	
	2. Read a flagged record. Expected: Shows the "Student ID" and the date, plus "Instructor Name (Raw)" - the text as read off the form - and "Unknown Instructor" where no match was found. This is what the staff member needs to correct it.	
	3. Open "Edit Record". Expected: The editable sections appear: "Management Scores (1-5)", "Performance Scores (1-5)" and "Remarks & Suggestions" / the "Instructor & Remarks" section.	
	4. Compare the on-screen scores against the paper form. Expected: Every score matches what the student actually marked. This is the point of validation.	
	5. Enter a score outside 1-5. Expected: Refused. The section is labelled "(1-5)" and must enforce it.	
	6. Correct the instructor and save. Expected: The record saves. On failure the message reads "Error saving:" rather than appearing to succeed.	
	7. Tap "Approve & Sync". Expected: Message reads "Data updated and queued for processing." and the record leaves the flagged list.	
	8. Confirm the corrected record reached the right instructor. Expected: The scores now appear against the instructor named on the paper form, for the correct term.	
	9. On another flagged record, tap "Discard". Expected: A confirmation is required. On confirming, the message reads "Record discarded." and it leaves the list.	
	10. Confirm what discarding actually did. Expected: The discarded record does NOT contribute to any instructor's scores. Confirm with the team whether the raw scan is retained for audit - a discard that erases the only copy of a student's evaluation needs to be a deliberate decision, not a surprise.	
Expected Result	Flagged records show enough raw detail to be corrected against the paper form, scores are constrained to 1-5, approving routes the data to the correct instructor, and discarding is confirmed and understood.	

Actual Result (Pass/Fail)	
Comments / Attachments (Screenshots, Logs)	Step 4 is the whole reason this screen exists. Step 10 should be settled with the team before the defense, because a panelist may well ask it.

USER ACCEPTANCE TESTING

Test Case ID	TC-S07	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	FAILED SCANS - RECOVERY QUEUE	
Preconditions	At least one scan has failed detection, e.g. from TC-S05 step 5.	
Test Data	One failed scan.	
Steps	1. Open "Failed Scans" from the Validation tab. Expected: Screen titled "Failed Scans" with a "Recovery Queue". While loading it reads "Loading failed scans..."; with none it reads "No failed scans" and "Every scan has been processed successfully."	
	2. Read a failed scan row. Expected: Shows the reason for failure - "Grid detection failed", "Table/corners not detected" or "Detection issue" - plus "Instructor:" and "Student ID:" where known, and "Unknown" or "Unknown date" where not.	
	3. Confirm the reason is specific enough to act on. Expected: The staff member can tell WHY it failed and therefore whether re-scanning would help. A bare "failed" with no reason is not enough.	
	4. Open a failed scan's detail. Expected: The detail view opens, showing the captured image or enough information to identify which paper form it was.	
	5. Establish whether the scan can be recovered. Expected: There is a path to either correct and resubmit it, or to re-scan the original form. A failed scan must not be a dead end, because the paper form may already have been filed away.	
	6. Recover one failed scan and confirm the outcome. Expected: It leaves the recovery queue and its data reaches the correct instructor.	
	7. Count the failed scans against the totals. Expected: Scans that failed are NOT counted as successfully gathered on the dashboard or on the admin's "Files Scanned" figure.	
Expected Result	Every failed scan is listed with a specific, actionable reason and can be recovered, and failed scans are never counted as successful.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 7 protects the integrity of the reported totals. Step 5 determines whether a failure means real data loss.	
Tester Name / Date

Test Case ID	TC-S08	
Capstone Project Title:	iEvaluate: An AI-Driven Mobile Instructor Evaluation and Performance Analysis System Using N8n Workflow Automation	
Team	ERMM	
	Project Leader:	Rodz Harvey Licayan
	Front-End Programmer:	Michael Thomas Gonzaga
	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	IMPORT FROM GOOGLE SHEETS [LIVE DATA]	
Preconditions	A prepared Google Sheet of evaluation data. The n8n import workflow is running.	
Test Data	One prepared sheet, including one deliberately bad row.	
Steps	1. On the dashboard, tap "IMPORT FROM GOOGLE SHEETS". Expected: The import screen opens and states what it expects, rather than presenting an unexplained blank form.	
	2. Start an import with the prepared sheet. Expected: Progress is shown, and the import ends with a clear success or failure message - never an indefinite spinner.	
	3. Cross-check the imported rows against the sheet. Expected: Every row is either imported or reported as an error. Nothing is silently skipped.	
	4. Confirm the deliberately bad row was caught. Expected: It is reported rather than imported. The SAO admin should also see it under "Import Errors".	
	5. Confirm the imported data landed against the correct term. Expected: The records belong to the active term, not a previous one.	
	6. Import the SAME sheet a second time. Expected: Duplicates are rejected or flagged, NOT counted twice.	
	7. Run the import with n8n stopped. Expected: A clear failure. No partial import is left behind.	
	8. Check the dashboard counters after a successful import. Expected: The term total increases by the number of rows actually imported, and by no more.	
Expected Result	A sheet imports with visible progress and an explicit outcome, bad rows are reported rather than dropped, re-importing does not double-count, and the counters reflect exactly what was imported.	
Actual Result (Pass/Fail)		
Comments / Attachments (Screenshots, Logs)	Step 6 is the one most likely to fail quietly and the most damaging if it does.

	QA Engineer:	Mark Lawrence Medillo
	Technical Writer:	Evangeline Caruana
Title / Business Scenario	STAFF SETTINGS AND END OF SHIFT	
Preconditions	Signed in as SAO staff. Access to the account's inbox for the email change.	
Test Data	A new password of at least six characters, NOT recorded in this document.	
Steps	1. Open the gatherer Settings. Expected: The screen loads (briefly "Loading gatherer settings...") and identifies the role as "Data Gatherer". The security section reads "Email, password, and account controls."	
	2. Tap "Edit Personal Details", change the name and save. Expected: The profile saves and the new name appears in the drawer.	
	3. Toggle "Haptic Feedback" off and on. Expected: The setting changes and persists after leaving and reopening Settings.	
	4. Tap "Edit Email" and submit a valid new address. Expected: Message reads "Email updated! Check your inbox for confirmation." The old address keeps working until the link is clicked.	
	5. Tap "Edit Password" and submit mismatched passwords. Expected: Refused with "Passwords do not match."	
	6. Submit a password shorter than six characters. Expected: Refused with "Password must be at least 6 characters."	
	7. Submit a fully valid password change. Expected: Message reads "Password updated successfully. Please log in again." and the app signs out. On failure it reads "Failed to update password."	
	8. Sign in with the old password, then the new one. Expected: The old password is rejected; the new one is accepted.	
	9. Queue at least one unsynced scan, then tap "End Shift & Log Out". Expected: A confirmation is required. IMPORTANT: the staff member should be warned that scans are still pending, or the scans must survive the logout. Ending a shift must not silently discard queued work.	
	10. Complete the logout, sign back in, and check the Sync Queue. Expected: The pending scans are still there and can be synced.	
	11. Open "Deactivate My Account", then CANCEL. Expected: A warning explains the account can only be restored by the SAO Admin, and cancelling leaves the account active.	
Expected Result	The staff member can maintain their own account with every password rule enforced, and ending a shift never loses queued scans.	
Actual Result (Pass/Fail)		

Comments / Attachments (Screenshots, Logs)	Steps 9 and 10 are the important ones. "End Shift & Log Out" is exactly when a tired user is most likely to lose unsynced work.

USER ACCEPTANCE TESTING

SUMMARY

Total cases : 9
Executed : 1 partial (TC-S01 steps 1, 3, 4, observed 31/08/2026)
Not executed : 8

Cases that change live data : TC-S02, S04, S05, S06, S08
Negative cases : TC-S03, TC-S05

WHAT THIS DOCUMENT EXISTS TO PROVE

1. A captured scan is stored locally BEFORE any upload (TC-S02/8)
2. A failed upload leaves scans queued, never dropped (TC-S05/1)
3. The queue survives an app restart (TC-S05/11)
4. Ending a shift does not discard unsynced scans (TC-S09/9,10)
5. Unreadable captures are refused before they queue (TC-S03)
6. Failed scans carry an actionable reason and can recover (TC-S07)
7. The same form is never counted twice (TC-S04/8, S08/6)
8. A staff account cannot reach any admin screen (TC-S01/2)

Items 1 to 4 are about DATA LOSS. A paper form is handled once, so a scan lost anywhere in this pipeline is gone for good. Treat any failure in those four as the highest-severity defect in the project, ahead of anything cosmetic.

CROSS-CHECK ALREADY CONFIRMED

The staff dashboard's term total (152) matches the SAO admin dashboard's "152 Files Scanned" for the same term, so the two roles agree on how much data has been gathered.
